## **1. A guide ?**

The goal of the programming guide is to explain, with concrete examples, the basics of the Mascot main classes. We want to show how it works and to solve the common problems the programmers can have when using Mascot.

Each part of the guide is linked to samples which can be found in the sources of mascotDev. You may find some difference between the included code of this page and the code of samples in mascotDev. This is due to the fact that the code is constantly moving. We hope to be synchronized between the guide and the code !
