THALES

Healthcare

- Applying ML methods in medical care is problematic.
- AI as 3rd-party actor in physician-patient relationship
- Responsibility, confidentiality?
- Learning must be done with available data.
 - Cannot randomize cares given to patients!
- Must validate models before use.

Researchers say use of artificial intelligence in medicine raises ethical questions

In a perspective piece, Stanford researchers discuss the ethical implications of using machine-learning tools in making health care decisions for patients.

Patricia Hannon ,<https://med.stanford.edu/news/all-news/2018/03/researchers-say-use-of-ai-in-medicine-raises-ethical-questions.html>

Trustable AI and eXplainable AI: a Reality Need

The need for explainable AI rises with the potential cost of poor decisions

XAI in a Nutshell

XAI in a Nutshell

Today

Training Data

Learning Process

Learned Function

This is an obstacle on the rail train

Output

User with a Task

- Why did you do that?
- Why not something else?
- When do you succeed?
- When do you fail?
- When can I trust you?
- How do I correct an error?

Tomorrow

Training Data

New Learning Process

Explainable Model

Obstacle on rail train
• Obstruction covering full width

Explanation Interface

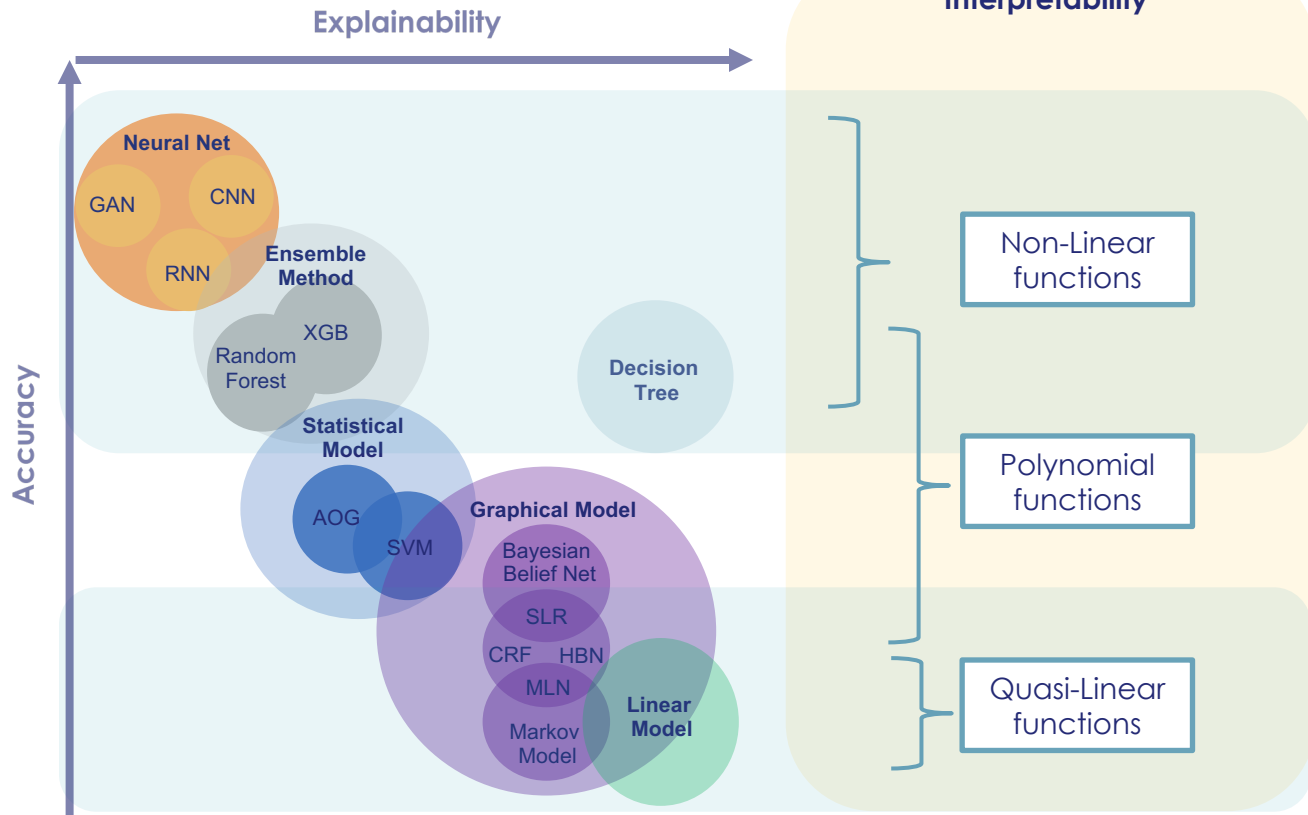

User with a Task

- I understand why
- I understand why not
- I know when you'll succeed
- I know when you'll fail
- I know when to trust you
- I know why you erred

How to Explain? Accuracy vs. Explainability

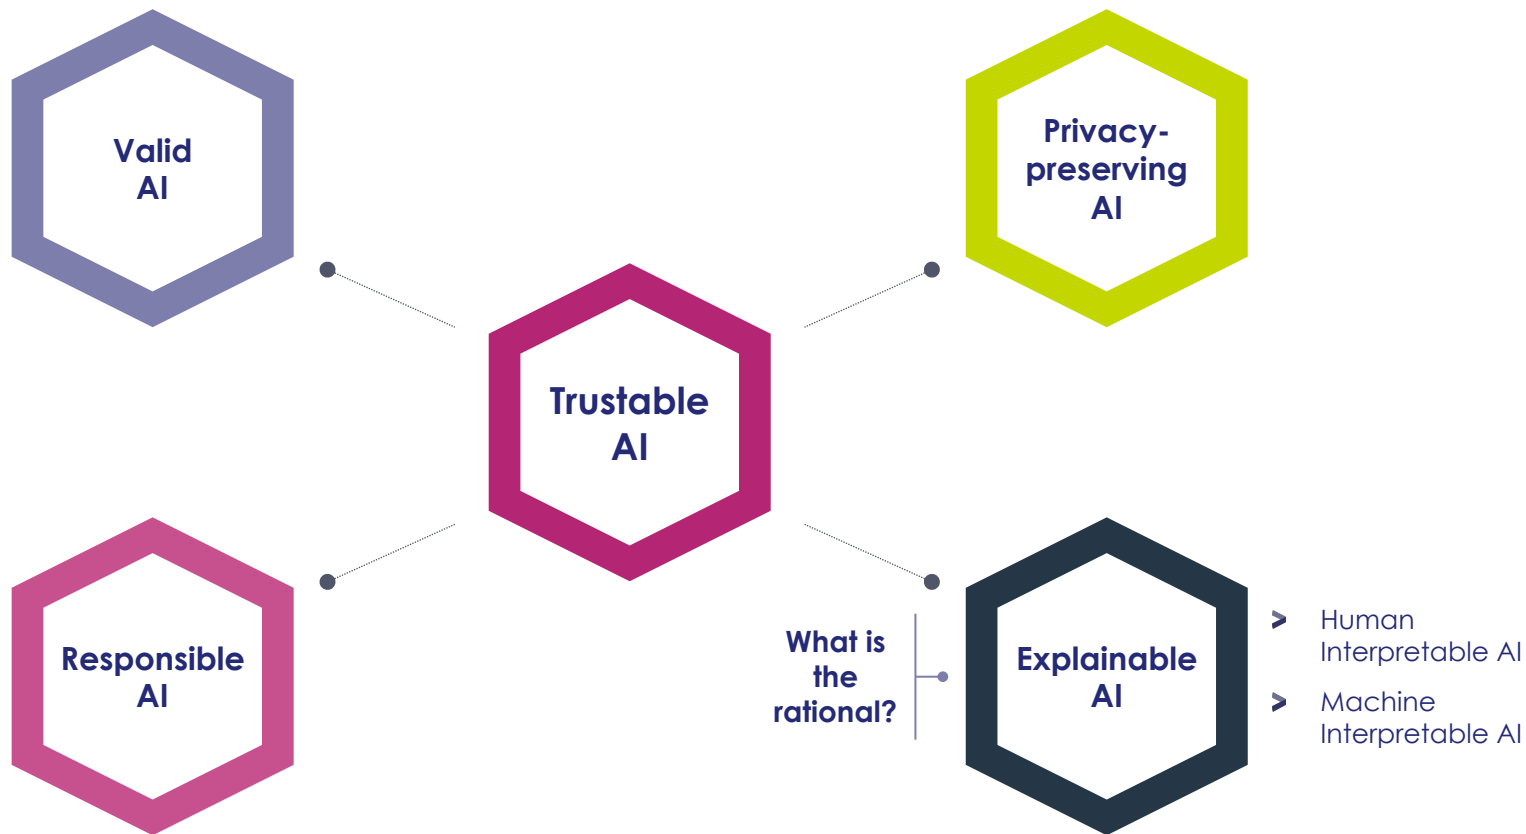

Learning

- Challenges:
 - Supervised
 - Unsupervised learning
- Approach:
 - Representation Learning
 - Stochastic selection
- Output:
 - Correlation**
 - No causation**

Trustable AI

AI Adoption: Requirements

Definitions

Explanation in AI aims to create a suite of techniques that produce more explainable models, while maintaining a high level of searching, learning, planning, reasoning performance: optimization, accuracy, precision; and enable human users to understand, appropriately trust, and effectively manage the emerging generation of AI systems.

explanation | ɛksplə'neɪʃ(ə)n |

noun

a statement or account that makes something clear: *the birth rate is central to any explanation of population trends.*

Models, Outputs of the Intelligent System

interpret | ɪn'tɜːprɪt |

verb (interprets, interpreting, interpreted) [*with object*]

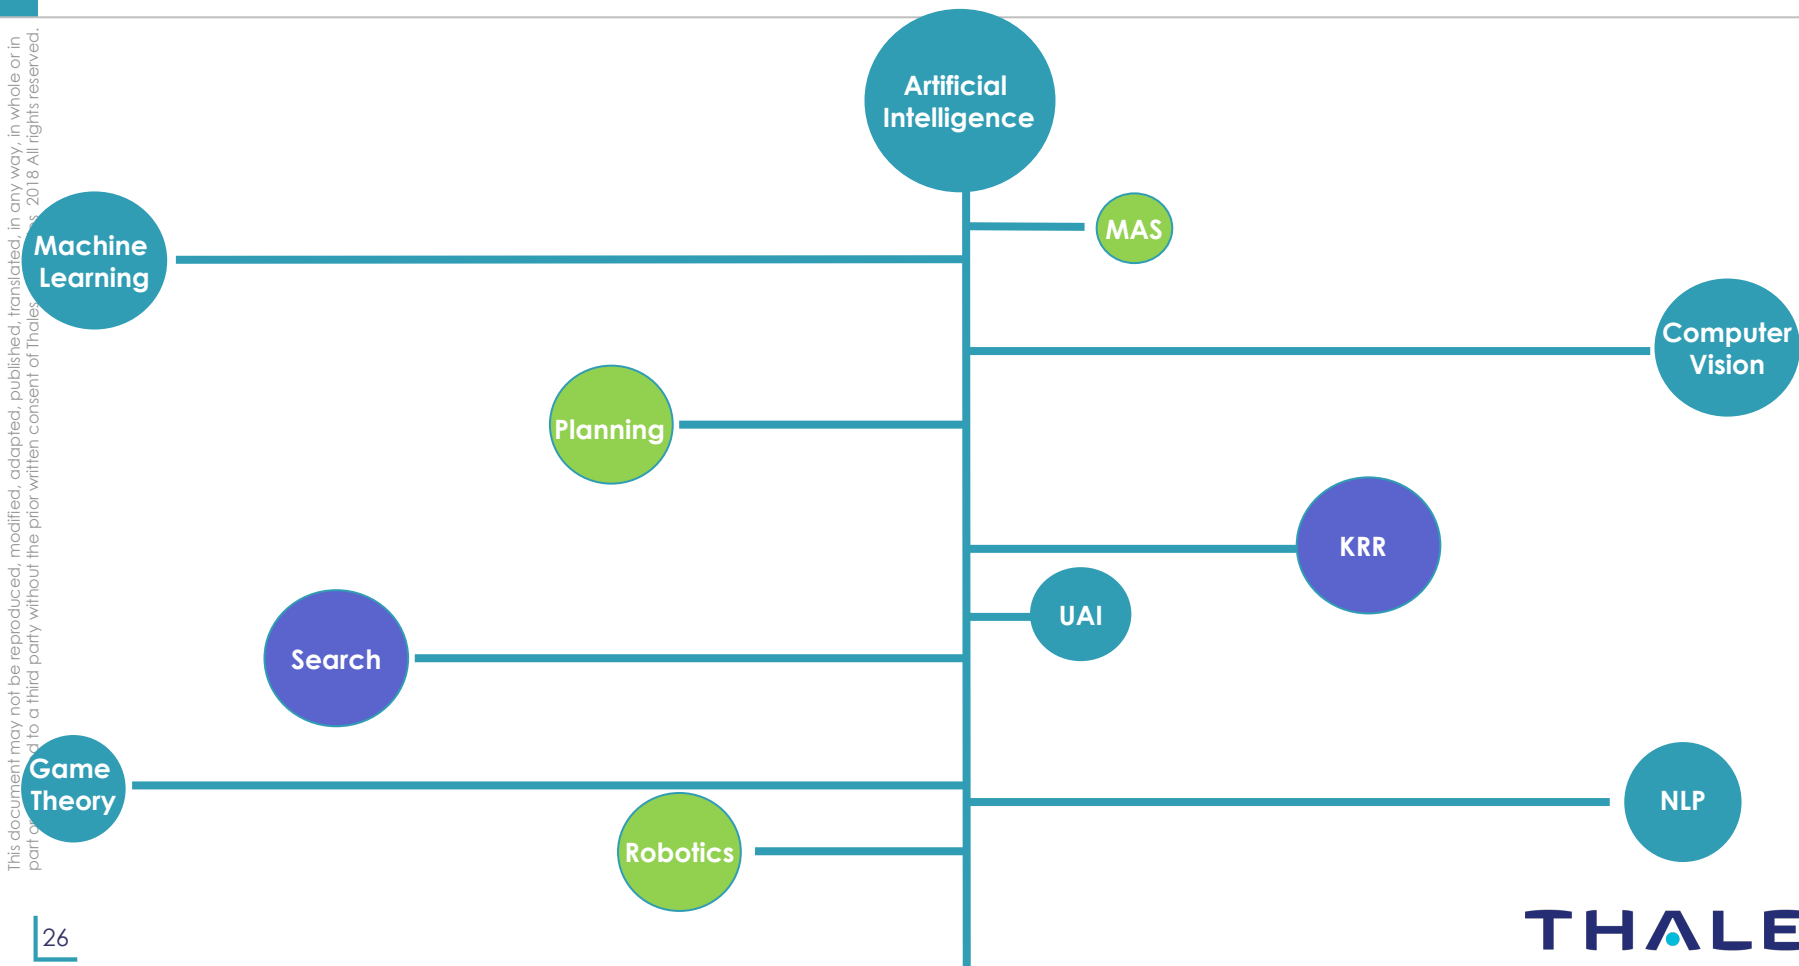

1 explain the meaning of (information or actions): *the evidence is difficult to interpret.*

Models, Outputs of the Intelligent System

Western Grebe

Description: This is a large bird with a white neck and a black back in the water.
Class Definition: The *Western Grebe* is a waterbird with a yellow pointy beak, white neck and belly, and black back.
Explanation: This is a *Western Grebe* because this bird has a long white neck, pointy yellow beak and red eye.

Laysan Albatross

Description: This is a large flying bird with black wings and a white belly.
Class Definition: The *Laysan Albatross* is a large seabird with a hooked yellow beak, black back and white belly.
Visual Explanation: This is a *Laysan Albatross* because this bird has a large wingspan, hooked yellow beak, and white belly.

Robot: I have decided to turn left.

Human: Why did you do that?

Robot: I believe that the correct action is to turn left
BECAUSE:

I'm being asked to go forward

AND This area in front of me was 20 cm higher than me
highlights area

AND the area to the left has maximum protrusions of less than 5 cm *highlights area*

AND I'm tilted to the right by more than 5 degrees.

Here is a display of the path through the tree that lead to this decision. *displays tree*

Human: How confident are you in this decision?

Robot: The distribution of actions that reached this leaf node is shown in this histogram. *displays histogram*
This action is predicted to be correct 67% of the time.

Human: Where did the threshold for the area in front come from?

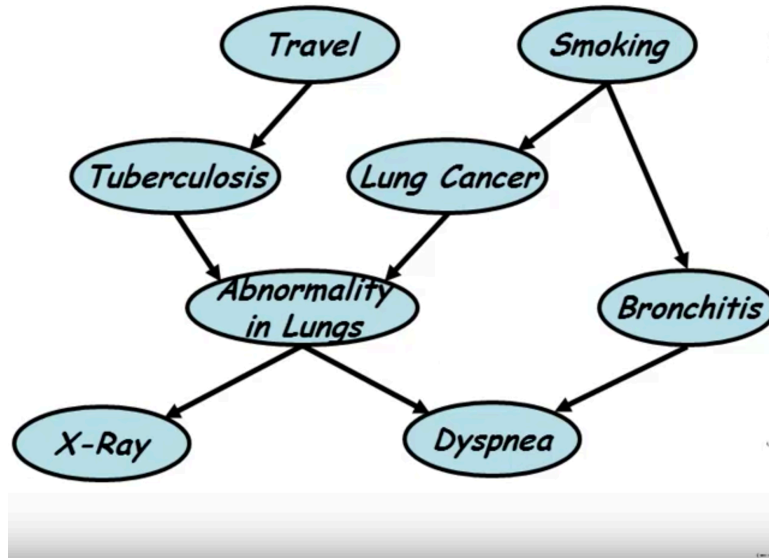

Robot: Here is the histogram of all training examples that reached this leaf. 80% of examples where this area was above 20 cm predicted the appropriate action to be "drive forward".

Applications

Explainable Boosted Object Detection – Industry Agnostic

Challenge: Object detection is usually performed from a large portfolio of Artificial Neural Networks (ANNs) architectures trained on large amount of labelled data. Explaining object detections is rather difficult due to the high complexity of the most accurate ANNs.

AI Technology: Integration of AI related technologies i.e., Machine Learning (Deep Learning / CNNs), and knowledge graphs / linked open data.

XAI Technology: Knowledge graphs and Artificial Neural Networks

THALES

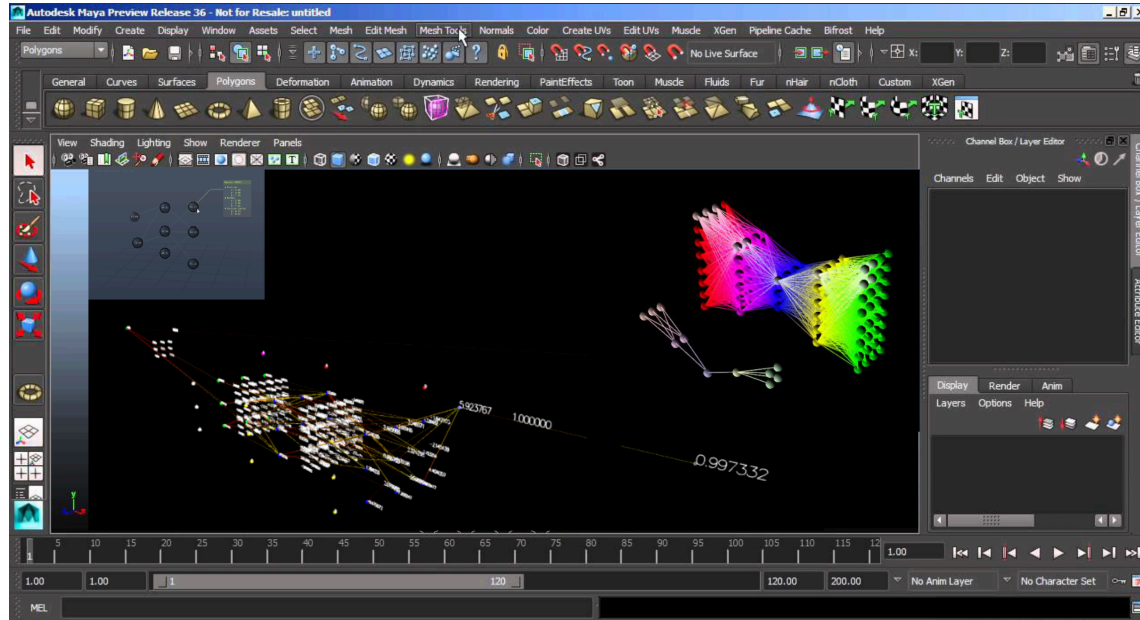

Fig. 2. Left image: results from baseline Faster RCNN: Paddle: 50% confidence, Person: 66%, Man: 46%. Right image: results from the semantic augmentation: **Paddle:** 74% confidence, Person: 66%, Man: 56%, Boat: 58% with explanation: Person, Paddle, Water as part of the context in the image and knowledge graph of concept Boat. (color print).

THALES

Debugging Artificial Neural Networks – Industry Agnostic

Challenge: Designing Artificial Neural Network architectures requires lots of experimentation (i.e., training phases) and parameters tuning (optimization strategy, learning rate, number of layers...) to reach optimal and robust machine learning models.

AI Technology: Artificial Neural Network

XAI Technology: Artificial Neural Network, 3D Modeling and Simulation Platform For AI

Explaining Visual Question Answering – Industry Agnostic

Tabular QA

Rank	Nation	Gold	Silver	Bronze	Total
1	India	102	58	37	197
2	Nepal	32	10	24	65
3	Sri Lanka	16	42	62	120
4	Pakistan	10	36	30	76
5	Bangladesh	2	10	35	47
6	Bhutan	1	6	7	14
7	Maldives	0	0	4	4

Q: How many medals did India win?
A: 197

Neural Programmer (2017) model
33.5% accuracy on WikiTableQuestions

Visual QA

Q: How symmetrical are the white bricks on either side of the building?
A: very

Kazemi and Elqursh (2017) model.
61.1% on VQA 1.0 dataset
(state of the art = 66.7%)

Reading Comprehension

Peyton Manning became the first quarterback ever to lead two different teams to multiple Super Bowls. He is also the oldest quarterback ever to play in a Super Bowl at age 39. The past record was held by John Elway, who led the Broncos to victory in Super Bowl XXXIII at age 38 and is currently Denver's Executive Vice President of Football Operations and General Manager

Q: Name of the quarterback who was 38 in Super Bowl XXXIII?
A: John Elway

Yu et al (2018) model.
84.6 F-1 score on SQuAD (state of the art)

Challenge: What is the robustness of Visual Question Answering models? What is the impact of semantics?

AI Technology: Artificial Neural Networks.

XAI Technology: Integrated Gradients

Q: How symmetrical are the white bricks on either side of the building?
A: very

Q: How **asymmetrical** are the white bricks on either side of the building?
A: very

Q: How **big** are the white bricks on either side of the building?
A: very

Q: How **fast** are the **bricks speaking** on either side of the building?
A: very

What is the **man** doing? → What is the **tweet** doing?
How many **children** are there? → How many **tweet** are there?

VQA model's response remains the same 75.6% of the time on questions that it originally answered correctly

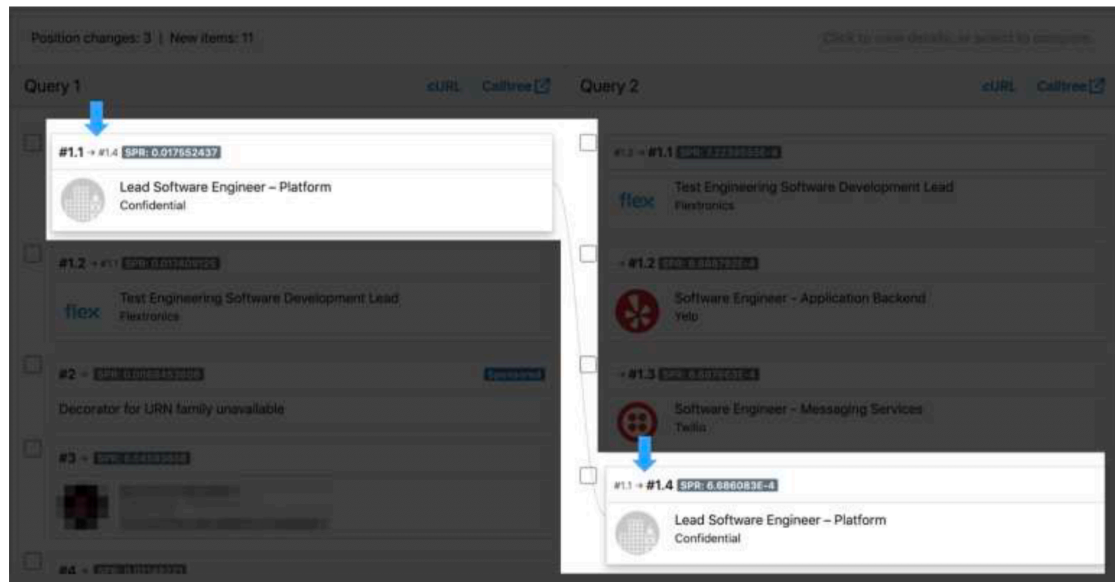

Relevance Debugging and Explaining – Industry Agnostic

Challenge: A Machine Learning system can fail in many different points e.g., data features selection, construction, inconsistencies. How to debug bad performance in machine learning models and prediction?

AI Technology: Artificial Neural Networks.

XAI Technology: Model / Prediction comparison

Obstacle Identification Certification (Trust) - Transportation

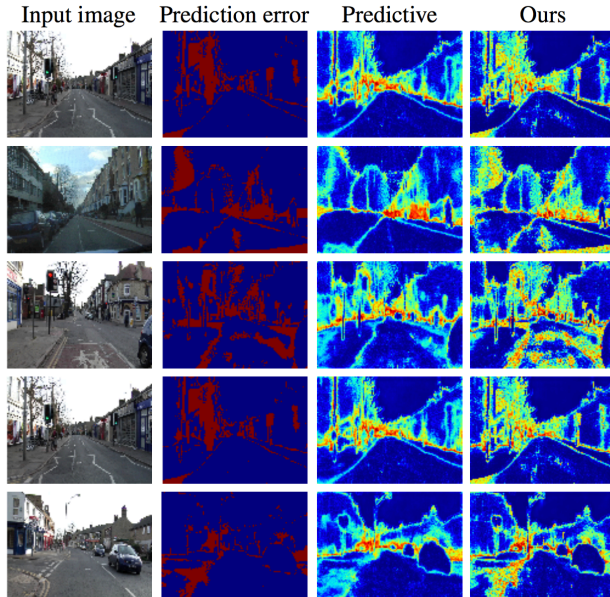

THALES

Challenge: Public transportation is getting more and more self-driving vehicles. Even if trains are getting more and more autonomous, the human stays in the loop for critical decision, for instance in case of obstacles. In case of obstacles trains are required to provide recommendation of action i.e., go on or go back to station. In such a case the human is required to validate the recommendation through an explanation exposed by the train or machine.

AI Technology: Integration of AI related technologies i.e., Machine Learning (Deep Learning / CNNs), and semantic segmentation.

XAI Technology: Deep learning and Epistemic uncertainty

Challenge: Globally 323,454 flights are delayed every year. Airline-caused delays totaled 20.2 million minutes last year, generating huge cost for the company. Existing in-house technique reaches 53% accuracy for **predicting flight delay**, does not provide any time estimation (in **minutes** as opposed to True/False) and is unable to capture the underlying reasons (explanation).

AI Technology: Integration of AI related technologies i.e., Machine Learning (Deep Learning / Recurrent neural Network), Reasoning (through semantics-augmented case-based reasoning) and Natural Language Processing for building a robust model which can (1) predict flight delays in minutes, (2) explain delays by comparing with historical cases.

- f8: 423 → 146.0, 📉 0.07

Explainable Risk Management - Finance

Challenge: Accenture is managing every year more than 80,000 opportunities and 35,000 contracts with an expected revenue of \$34.1 billion. Revenue expectation does not meet estimation due to the complexity and risks of critical contracts. This is, in part, due to the (1) large volume of projects to assess and control, and (2) the existing non-systematic assessment process.

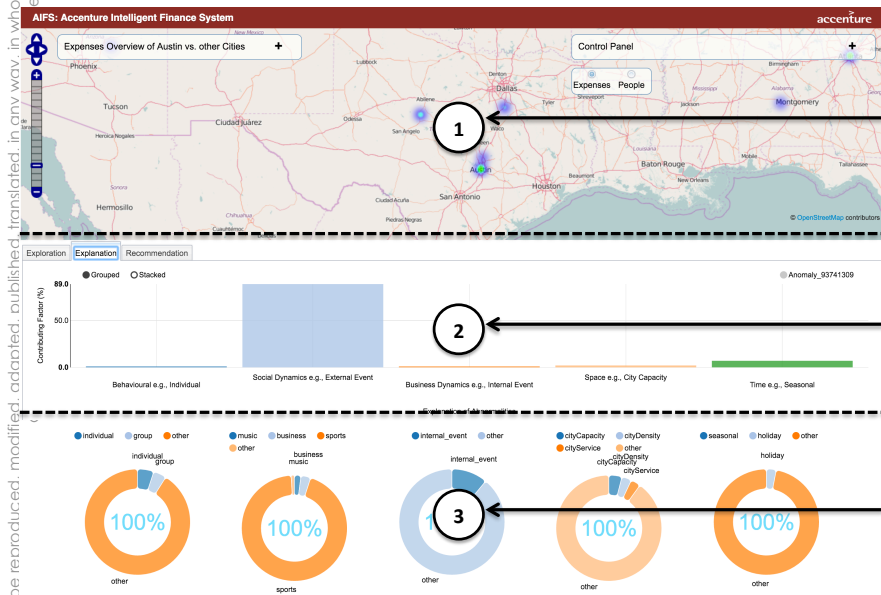

AI Technology: Integration of AI technologies i.e., Machine Learning, Reasoning, Natural Language Processing for building a robust model which can (1) predict revenue loss, (2) recommend corrective actions, and (3) explain why such actions might have a positive impact.

XAI Technology: Knowledge graph embedded Random Forrest

Jiewen Wu, Freddy Lécué, Christophe Guéret, Jer Hayes, Sara van de Moosdijk, Gemma Gallagher, Peter McCanney, Eugene Eichelberger: Personalizing Actions in Context for Risk Management Using Semantic Web Technologies. International Semantic Web Conference (2) 2017: 367-383

categories for events)

Freddy Lécué, Jiewen Wu: Explaining and predicting abnormal expenses at large scale using knowledge graph based reasoning. J. Web Sem. 44: 89-103 (2017)

Challenge: Predicting and explaining abnormally employee expenses (as high accommodation price in 1000+ cities).

AI Technology: Various techniques have been matured over the last two decades to achieve excellent results. However most methods address the problem from a statistic and pure data-centric angle, which in turn limit any interpretation. We elaborated a web application running live with real data from (i) travel and expenses from Accenture, (ii) external data from third party such as Google Knowledge Graph, DBpedia (relational DataBase version of Wikipedia) and social events from Eventful, for explaining abnormalities.

XAI Technology: Knowledge graph embedded Ensemble Learning

Counterfactual Explanations for Credit Decisions (1) - Finance

- Local, post-hoc, contrastive explanations of black-box classifiers

- Required minimum change in input vector to flip the decision of the classifier.

- Interactive Contrastive Explanations

Challenge: We predict loan applications with off-the-shelf, interchangeable black-box estimators, and we explain their predictions with counterfactual explanations. In counterfactual explanations the model itself remains a black box; it is only through changing inputs and outputs that an explanation is obtained.

AI Technology: Supervised learning, binary classification.

XAI Technology: Post-hoc explanation, Local explanation, Counterfactuals, Interactive explanations

Results

These results are for women who have already had surgery. This table shows the percentage of women who survive at least years after surgery, based on the information you have provided.

Treatment	Additional Benefit	Overall Survival %
Surgery only	-	72%
+ Hormone therapy	0%	72%

If death from breast cancer were excluded, 82% would survive at least 10 years.

Show ranges?

Challenge: Predict is an online tool that helps patients and clinicians see how different treatments for early invasive breast cancer might improve survival rates after surgery.

AI Technology: competing risk analysis

XAI Technology: Interactive explanations, Multiple representations.

DEEL (Dependable Explainable Learning) Project 2019-2024

➤ Research institutions

➤ Industrial partners

➤ Academic partners

– Science and technology to develop new methods towards Trustable and Explainable AI

System Robustness

- To biased data
- Of algorithm
- To change
- To attacks

Certificability

- Structural warranties
- Risk auto evaluation
- External audit

Explicability & Interpretability

Privacy by design

- Differential privacy
- Homomorphic coding
- Collaborative learning
- To attacks

(Some) Initiatives: XAI in EU

- **Explainable AI is motivated by real-world applications in AI**
- **Not a new problem – a reformulation of past research challenges in AI**
- **Multi-disciplinary: multiple AI fields, HCI, social sciences (multiple definitions)**
- **In AI (in general): many interesting / complementary approaches**
- **Many industrial applications already – crucial for AI adoption in critical systems**

- Creating awareness! Success stories!
- Foster multi-disciplinary collaborations in XAI research.
- Help shaping industry standards, legislation.
- More work on transparent design.
- Investigate symbolic and sub-symbolic reasoning.

■ *Evaluation:*

- *We need benchmark - Shall we start a task force?*
- *We need an XAI challenge - Anyone interested?*
- *Rigorous, agreed upon, human-based evaluation protocols*

Wherever safety and Security are Critical, Thales can build smarter solutions. Everywhere.

Job Openings

Technology leader for the Defence, the combined expertise of have made Thales a key player in keeping the public protecting the national security interests of countries.

Established in 1972, Thales Canada has over 1,800 employees in Toronto and Vancouver working in Defence, Avionics and Space.

This is a unique opportunity to play a key role on a Technology (TRT) in Canada (Quebec and Montreal). We have applied R&T experts at five locations worldwide. 100+ intelligence technologies. Our passion is imagining and applying cutting edge AI technologies. Not only will you join a global network, but this TRT is also co-located within Core Intelligence eXpertise) i.e., the new flagship program to work.

Job Description

An AI (Artificial Intelligence) Research and Technology leader developing innovative prototypes to demonstrate artificial intelligence. To be successful in this role, one must be what's new, and a strong ability to learn new technologies and hands-on technical skills and be familiar with latest developments will contribute as technical subject matter experts and its business units. In addition to the implementation, the individual will also be involved in the initial project thinking, and team work is also critical for this role.

As a Research and Technology Applied AI Scientist you will be working on fast-paced projects.

Professional Skill Requirements

- Good foundation in mathematics, statistics and programming

- Strong knowledge of Machine Learning foundations
- Strong development skills with Machine Learning frameworks e.g., Scikit-learn, TensorFlow, PyTorch, Theano
- Knowledge of mainstream Deep Learning architectures (MLP, CNN, RNN, etc).
- Strong Python programming skills
- Working knowledge of Linux OS
- Eagerness to contribute in a team-oriented environment
- Demonstrated leadership abilities in school, civil or business organisations
- Ability to work creatively and analytically in a problem-solving environment
- Proven verbal and written communication skills in English (talks, presentations, publications, etc.)

Basic Qualifications

- Master's degree in computer science, engineering or mathematics fields
- Prior experience in artificial intelligence, machine learning, natural language processing, or advanced analytics

Preferred Qualifications

- Minimum 3 years of analytic experience Python with interest in artificial intelligence with working structured and unstructured data (SQL, Cassandra, MongoDB, Hive, etc.)
- A track record of outstanding AI software development with Github (or similar) evidence
- Demonstrated abilities in designing large scale AI systems
- Demonstrated interest in Explainable AI and/or relational learning
- Work experience with programming languages such as C, C++, Java, scripting languages (Perl/Python/Ruby) or similar
- Hands-on experience with data visualization, analytics tools/languages
- Demonstrated teamwork and collaboration in professional settings
- Ability to establish credibility with clients and other team members

MAY 2ND, 2019
