The Twitter Social Graph

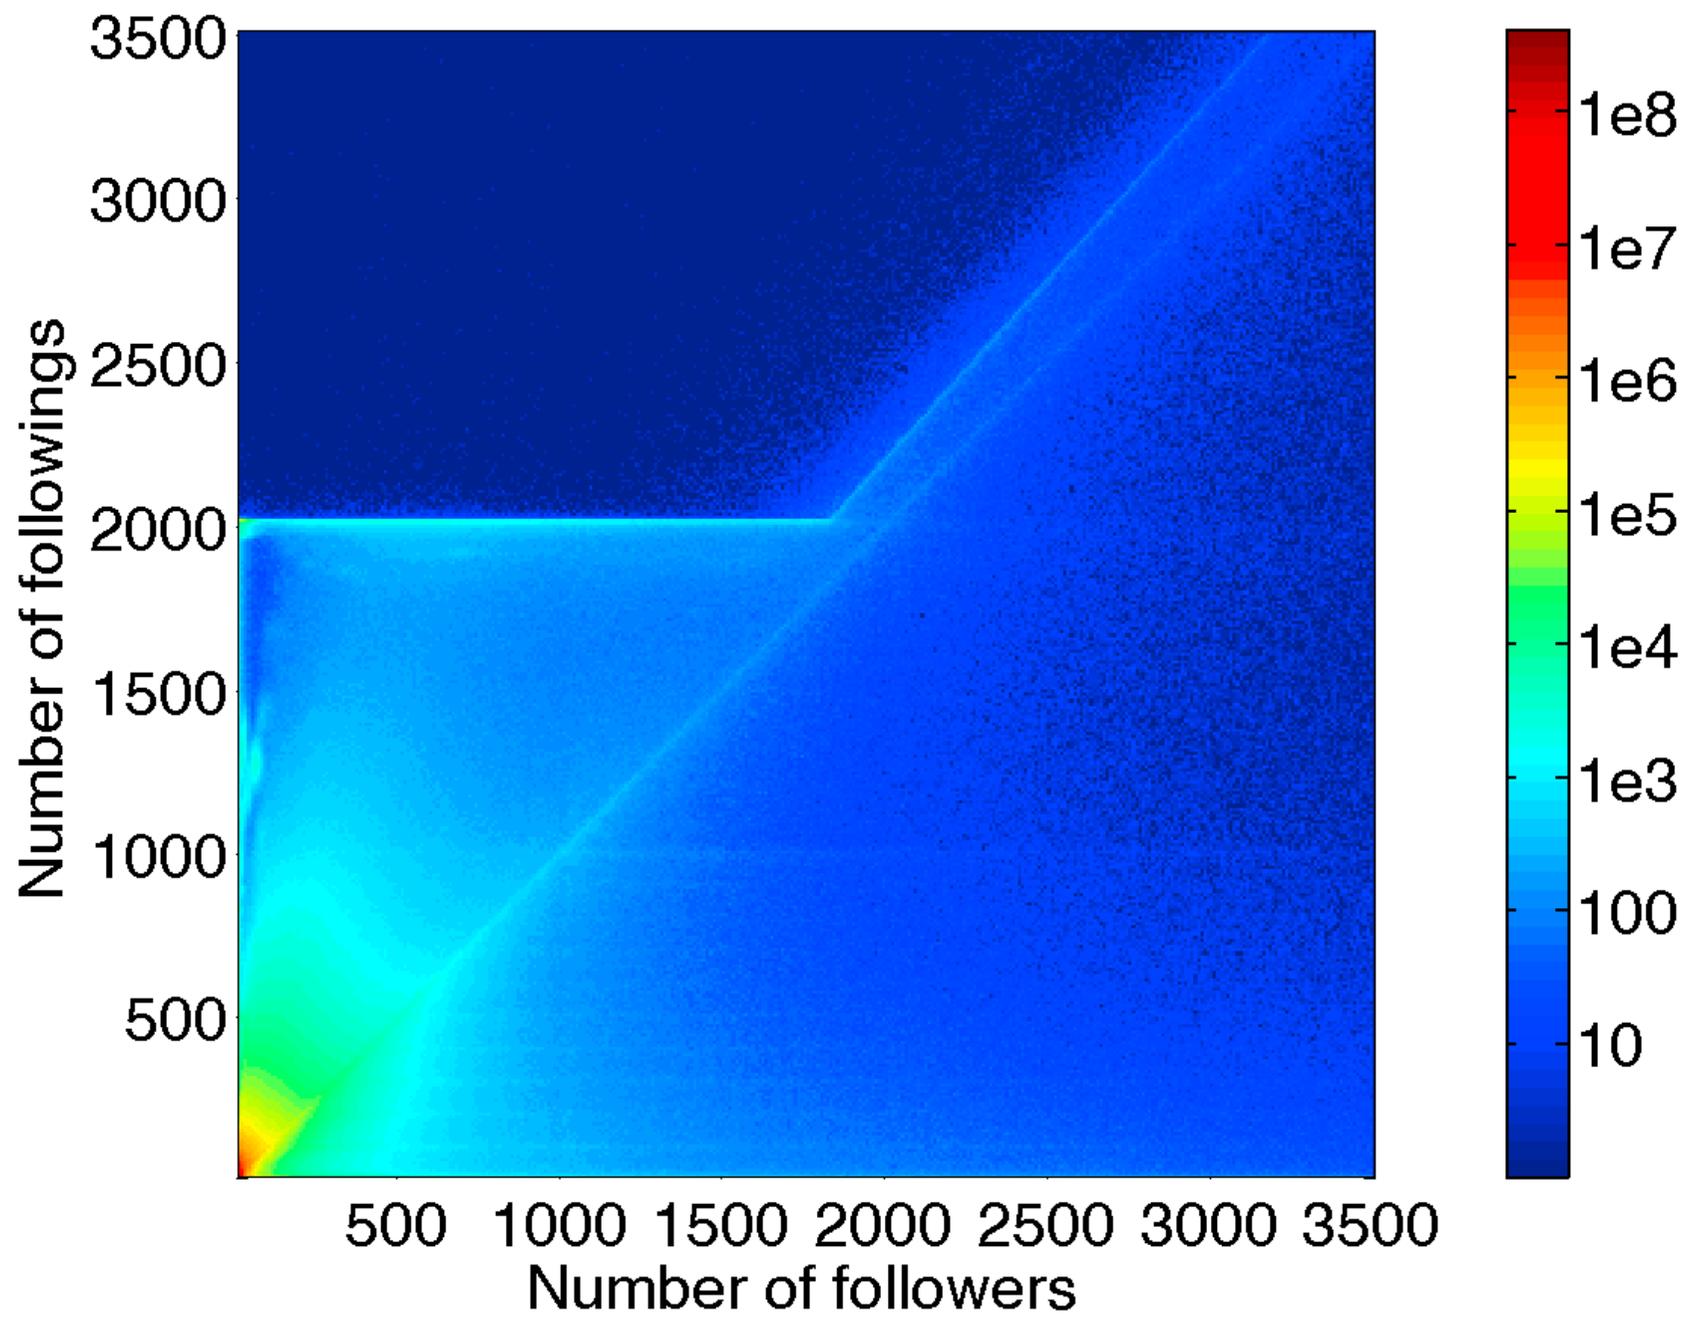

+500 million nodes
+24 billion edges

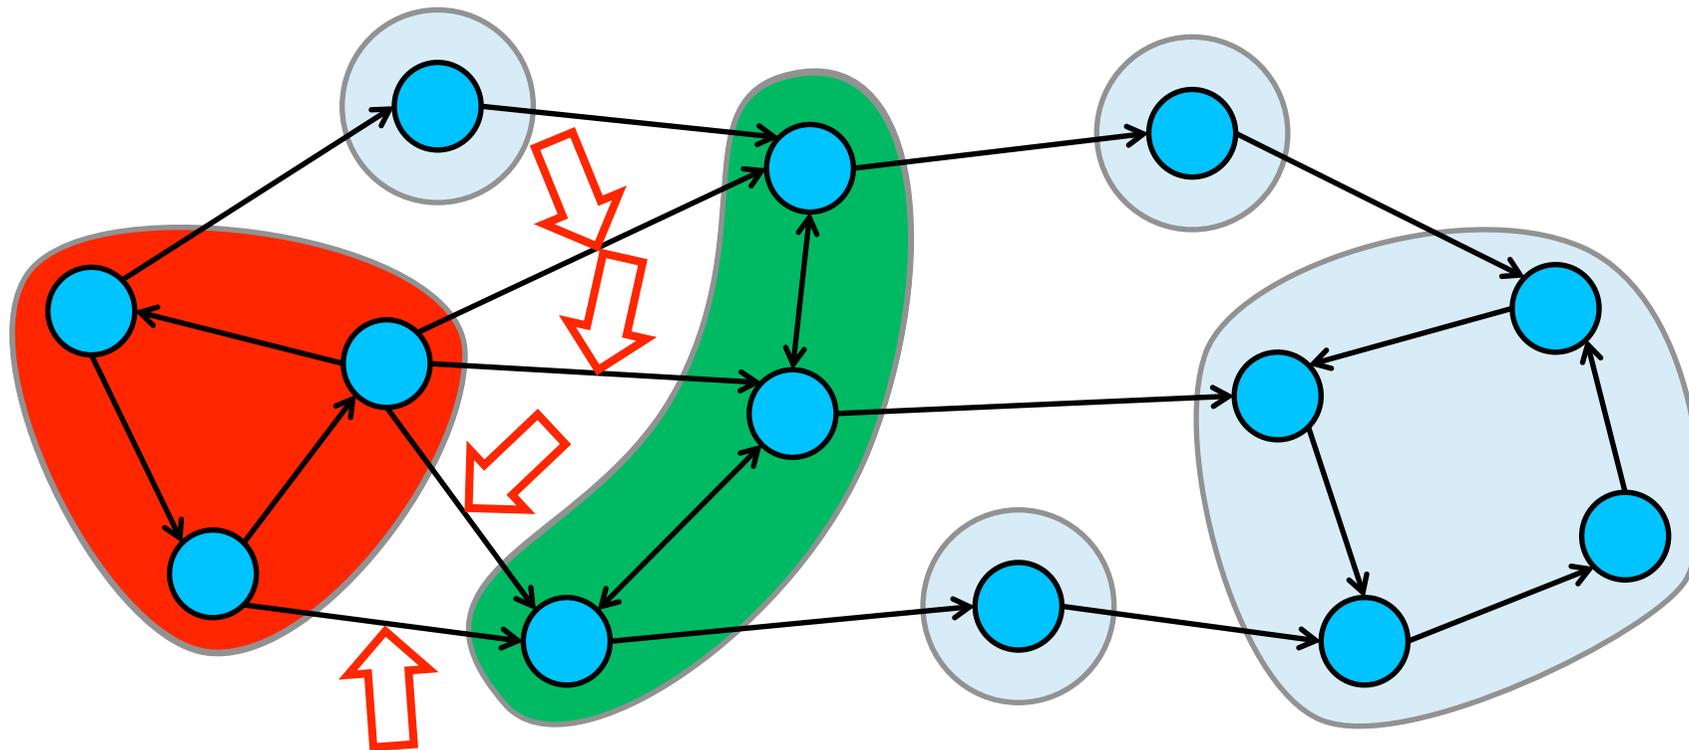

Challenges

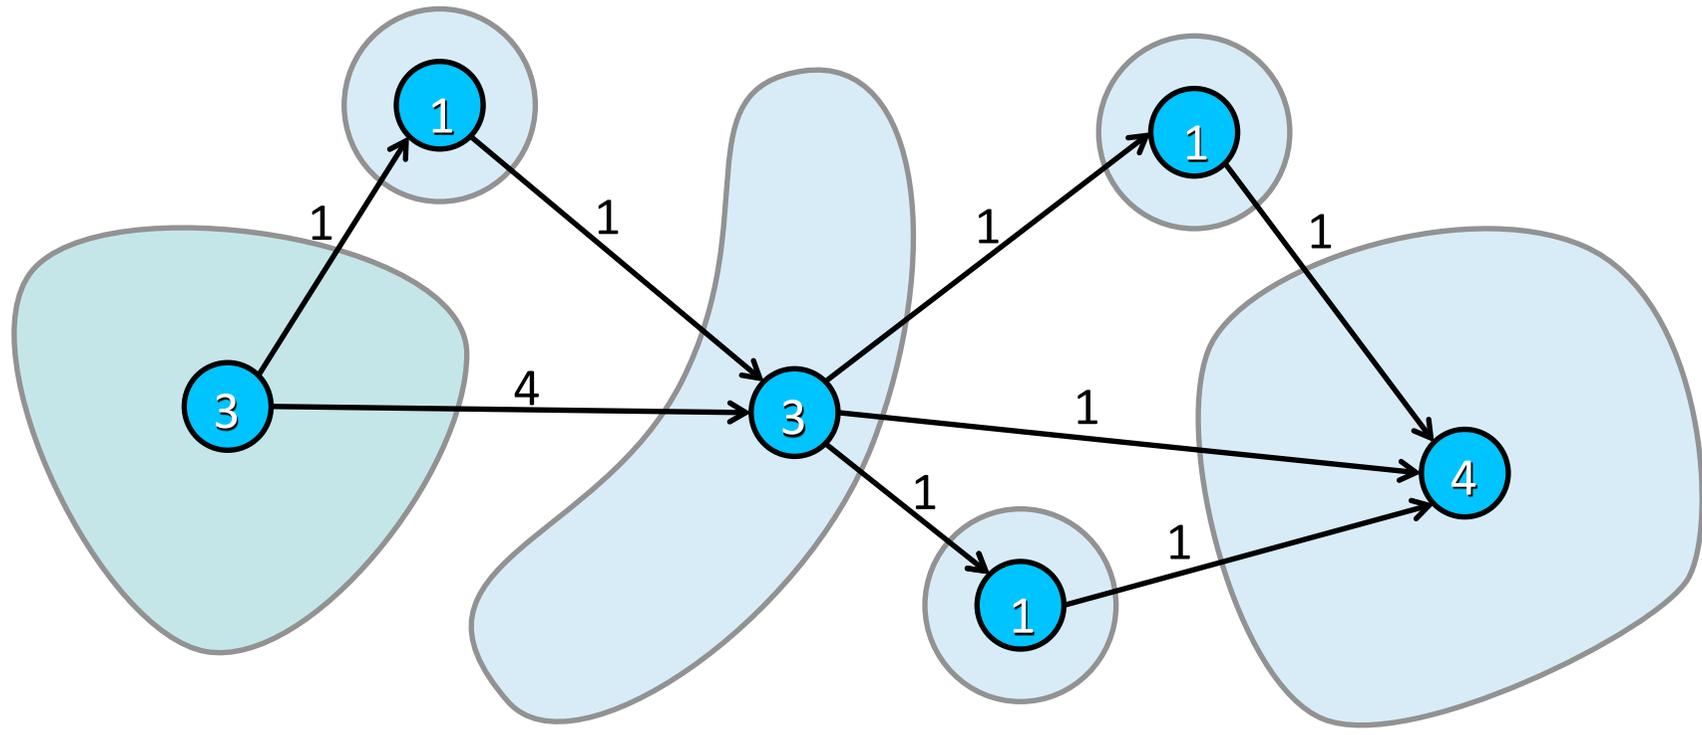

1. Collect the graph
2. Decompose the graph
3. Give a physical meaning to the decomposition

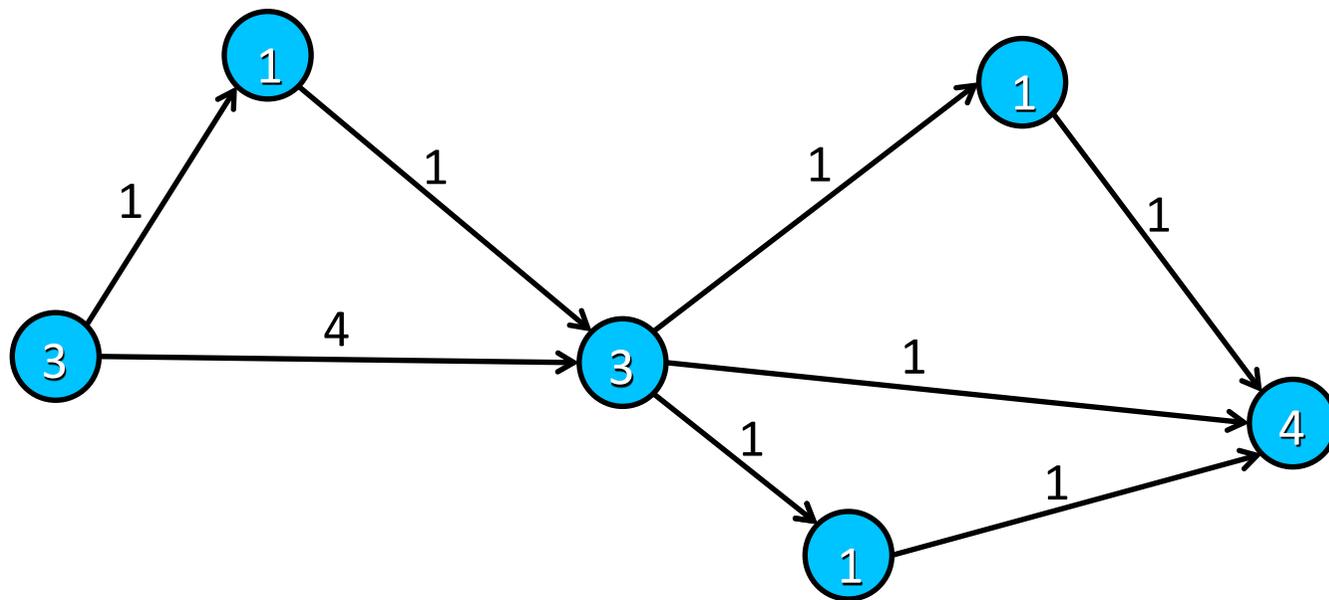

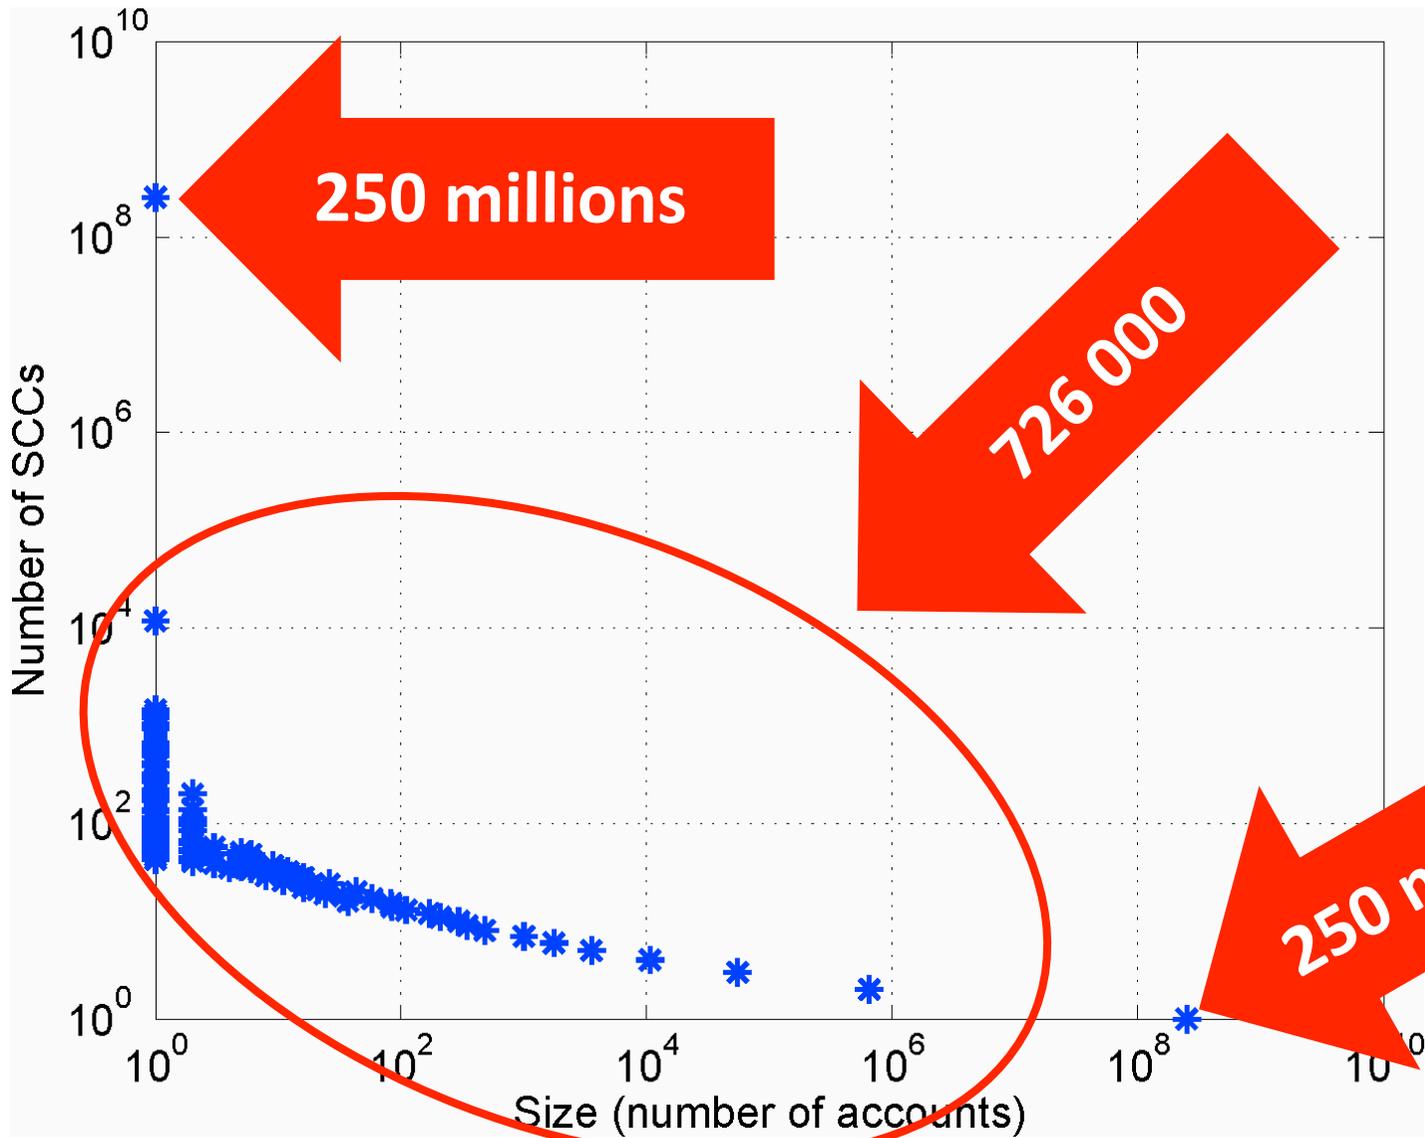

How is constraint
information propagation?

Identify the highways

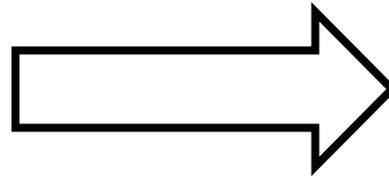

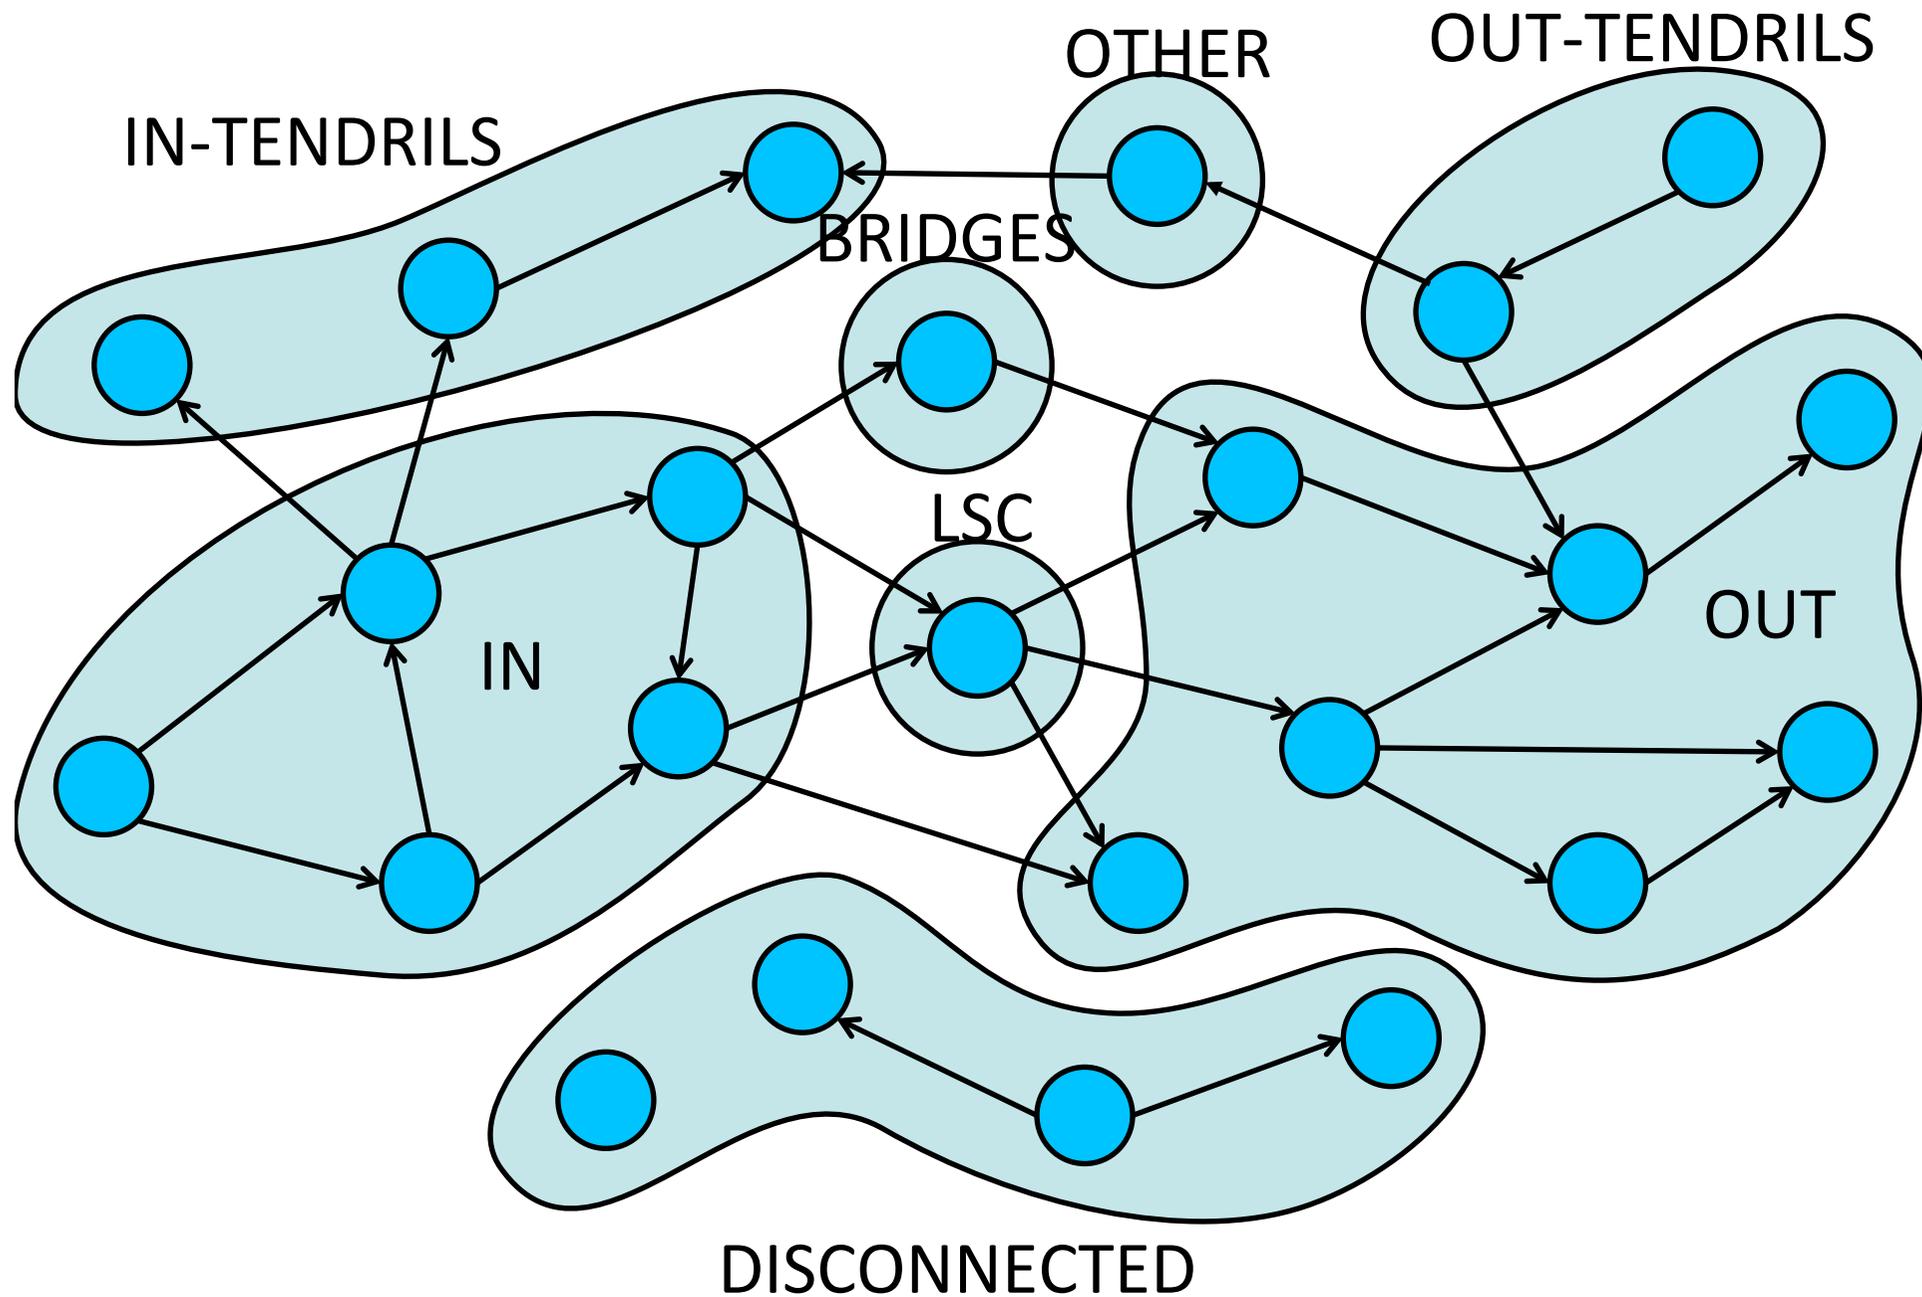

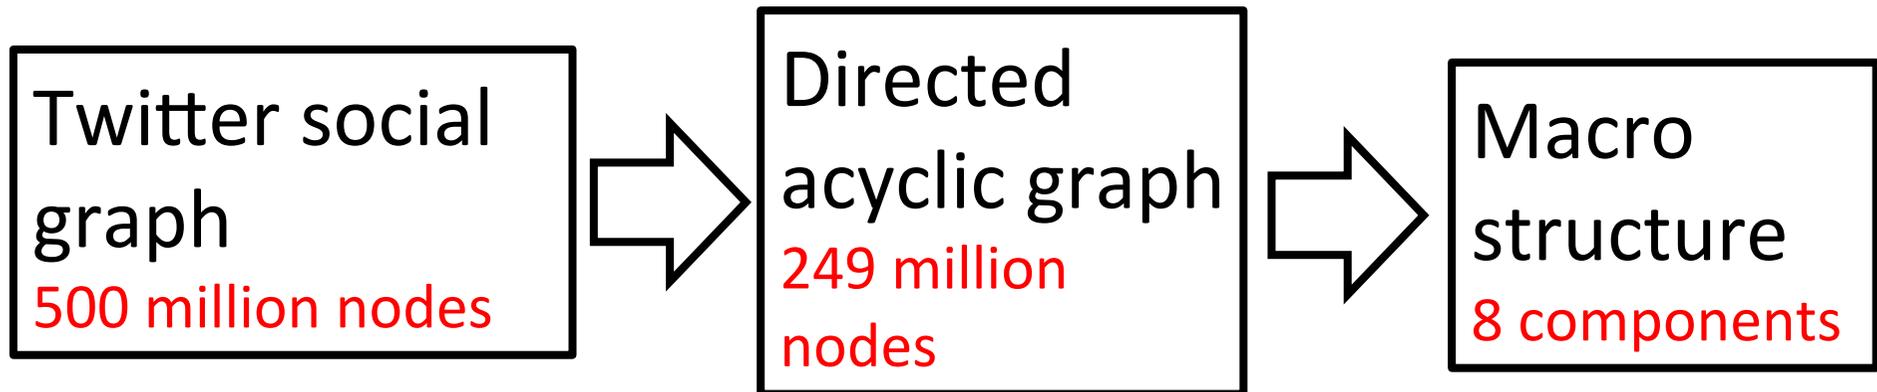

Twitter social
graph
500 million nodes

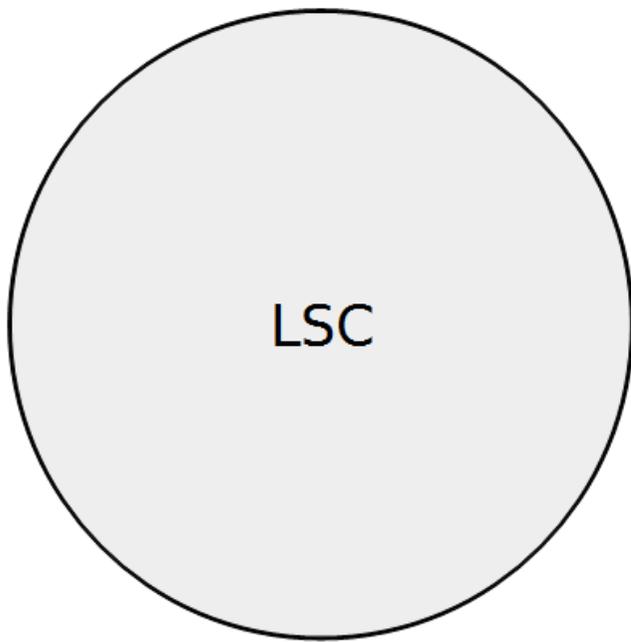

Directed
acyclic graph
249 million nodes

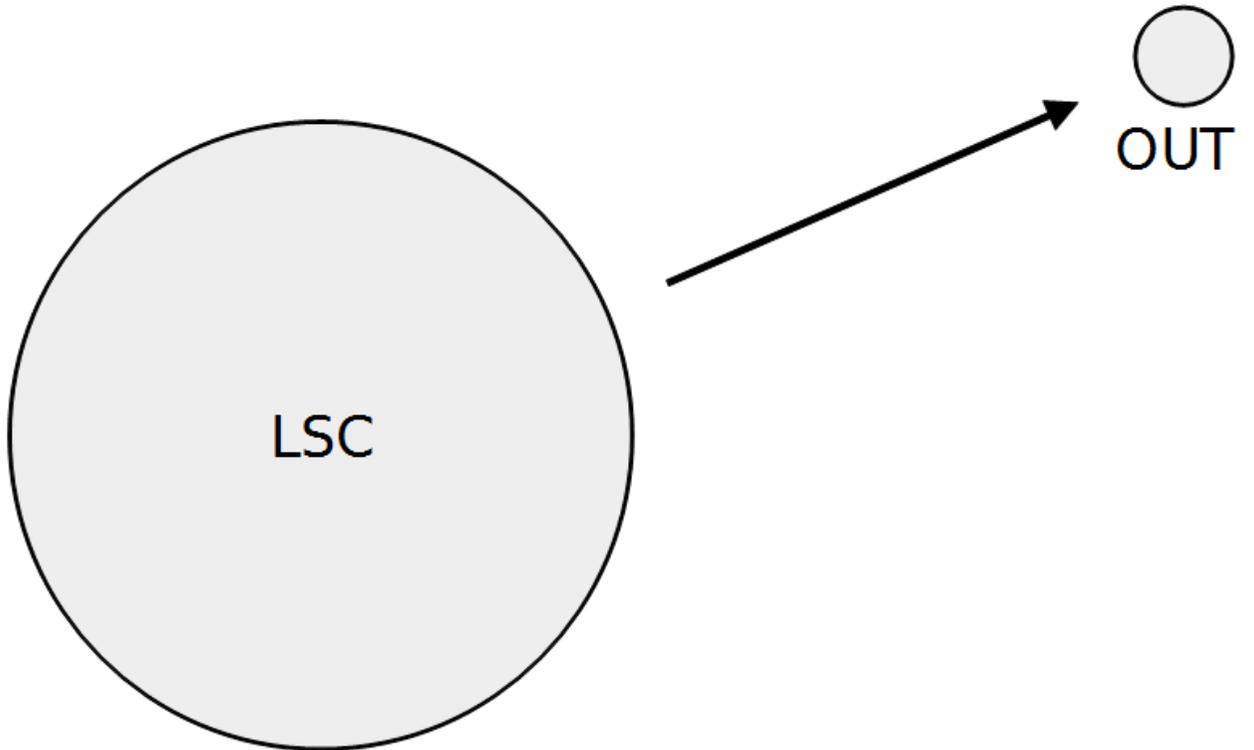

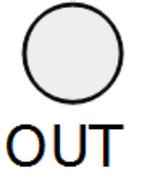

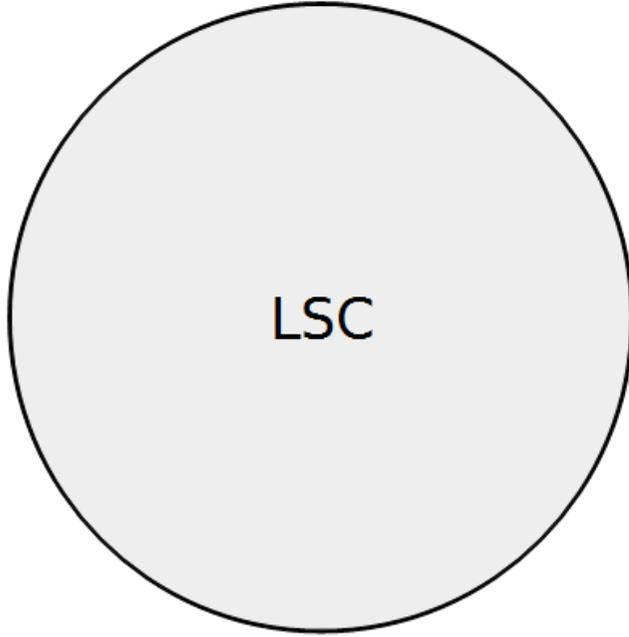

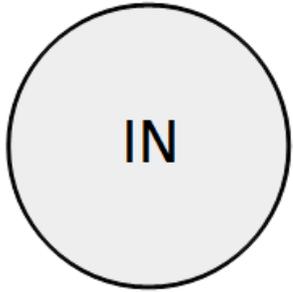

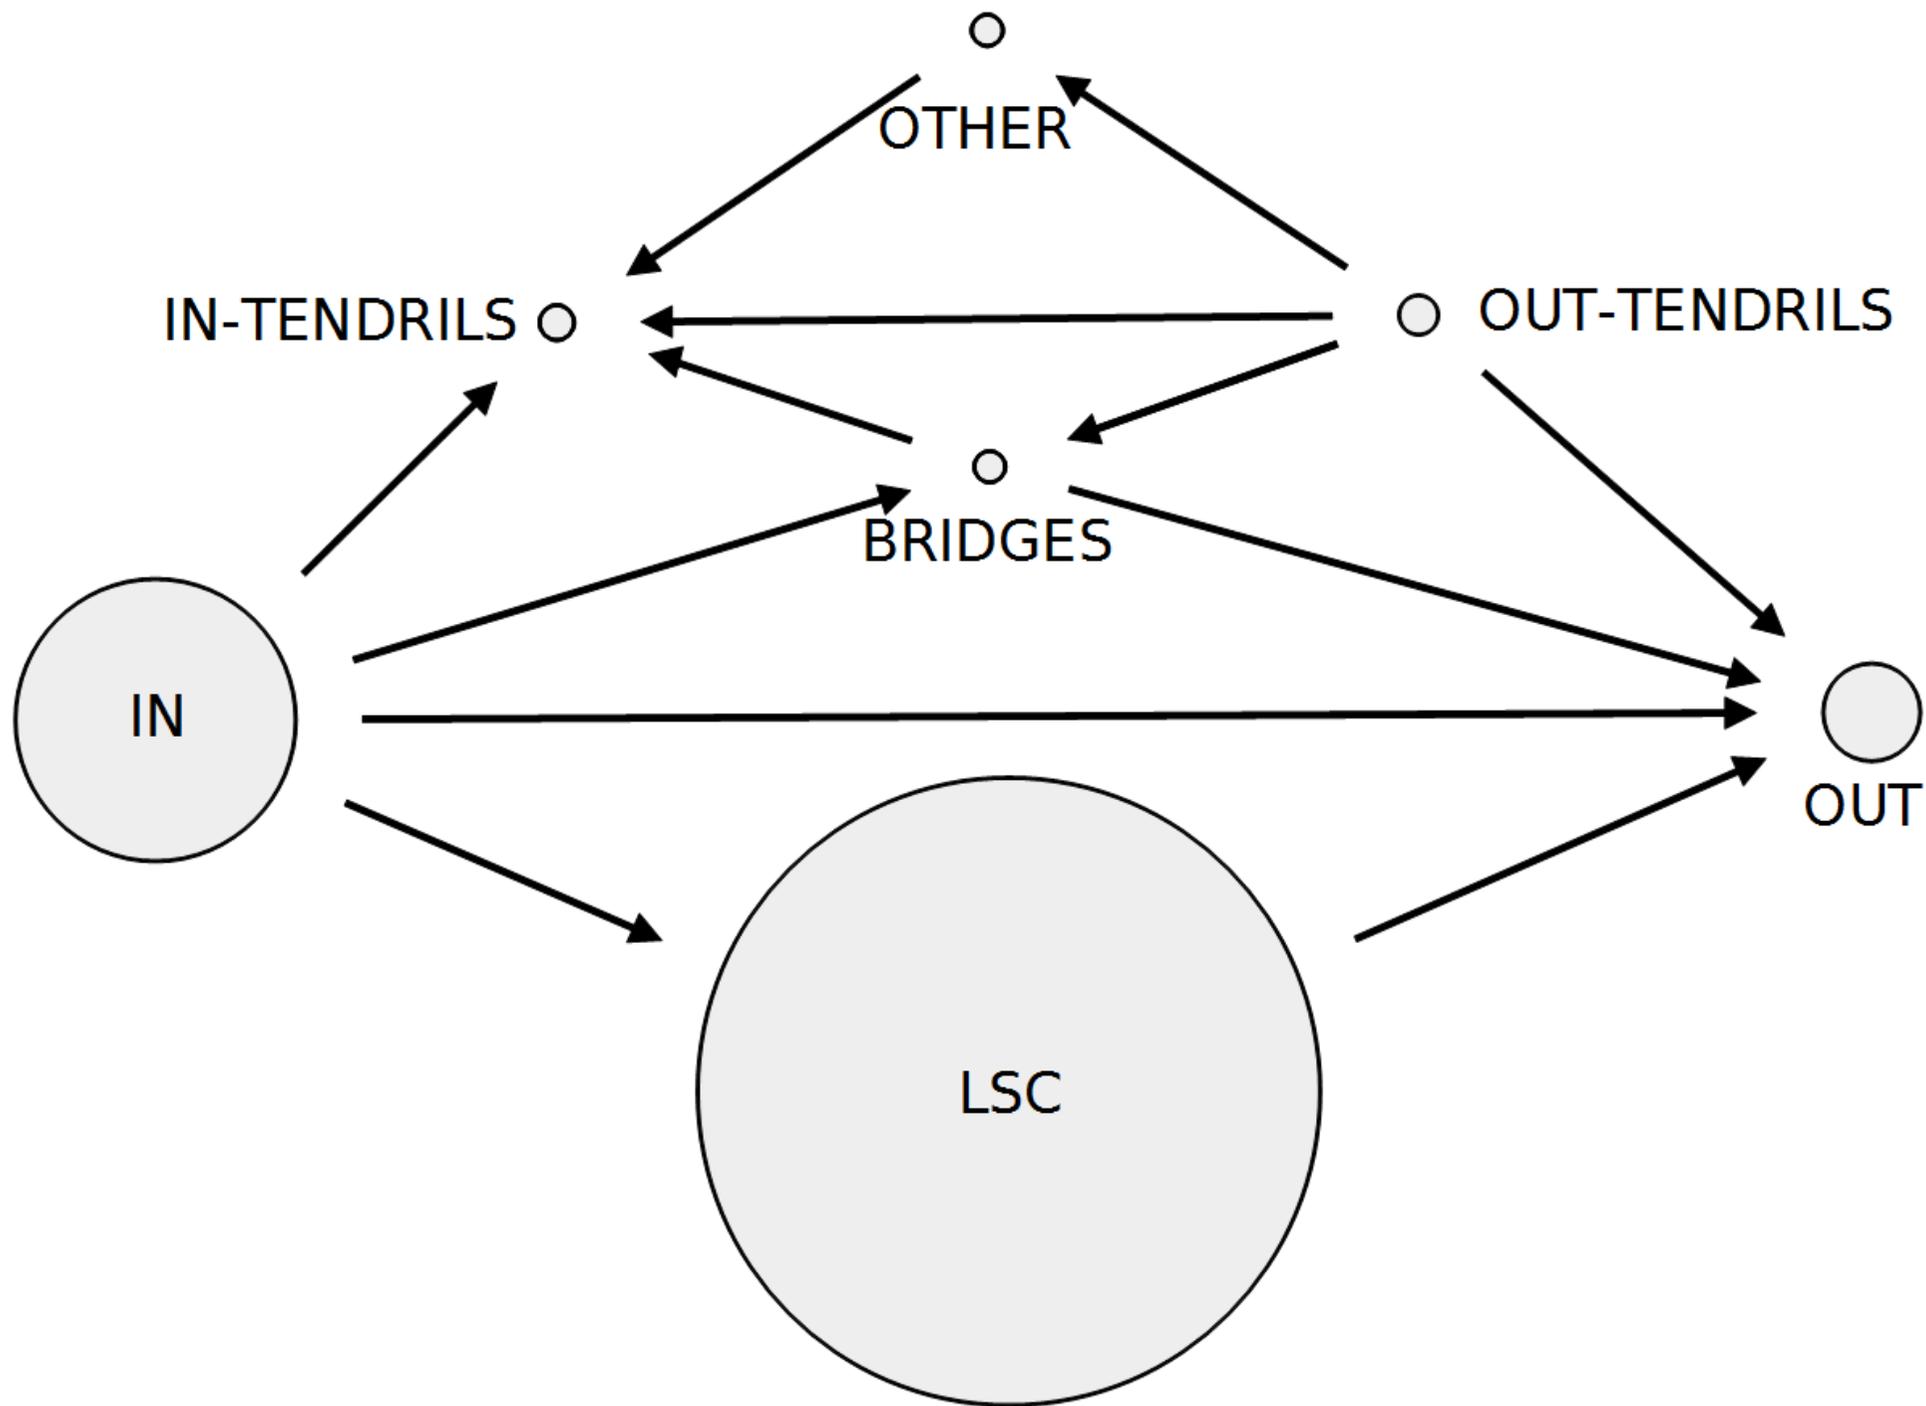

What is the physical
meaning of decomposition?

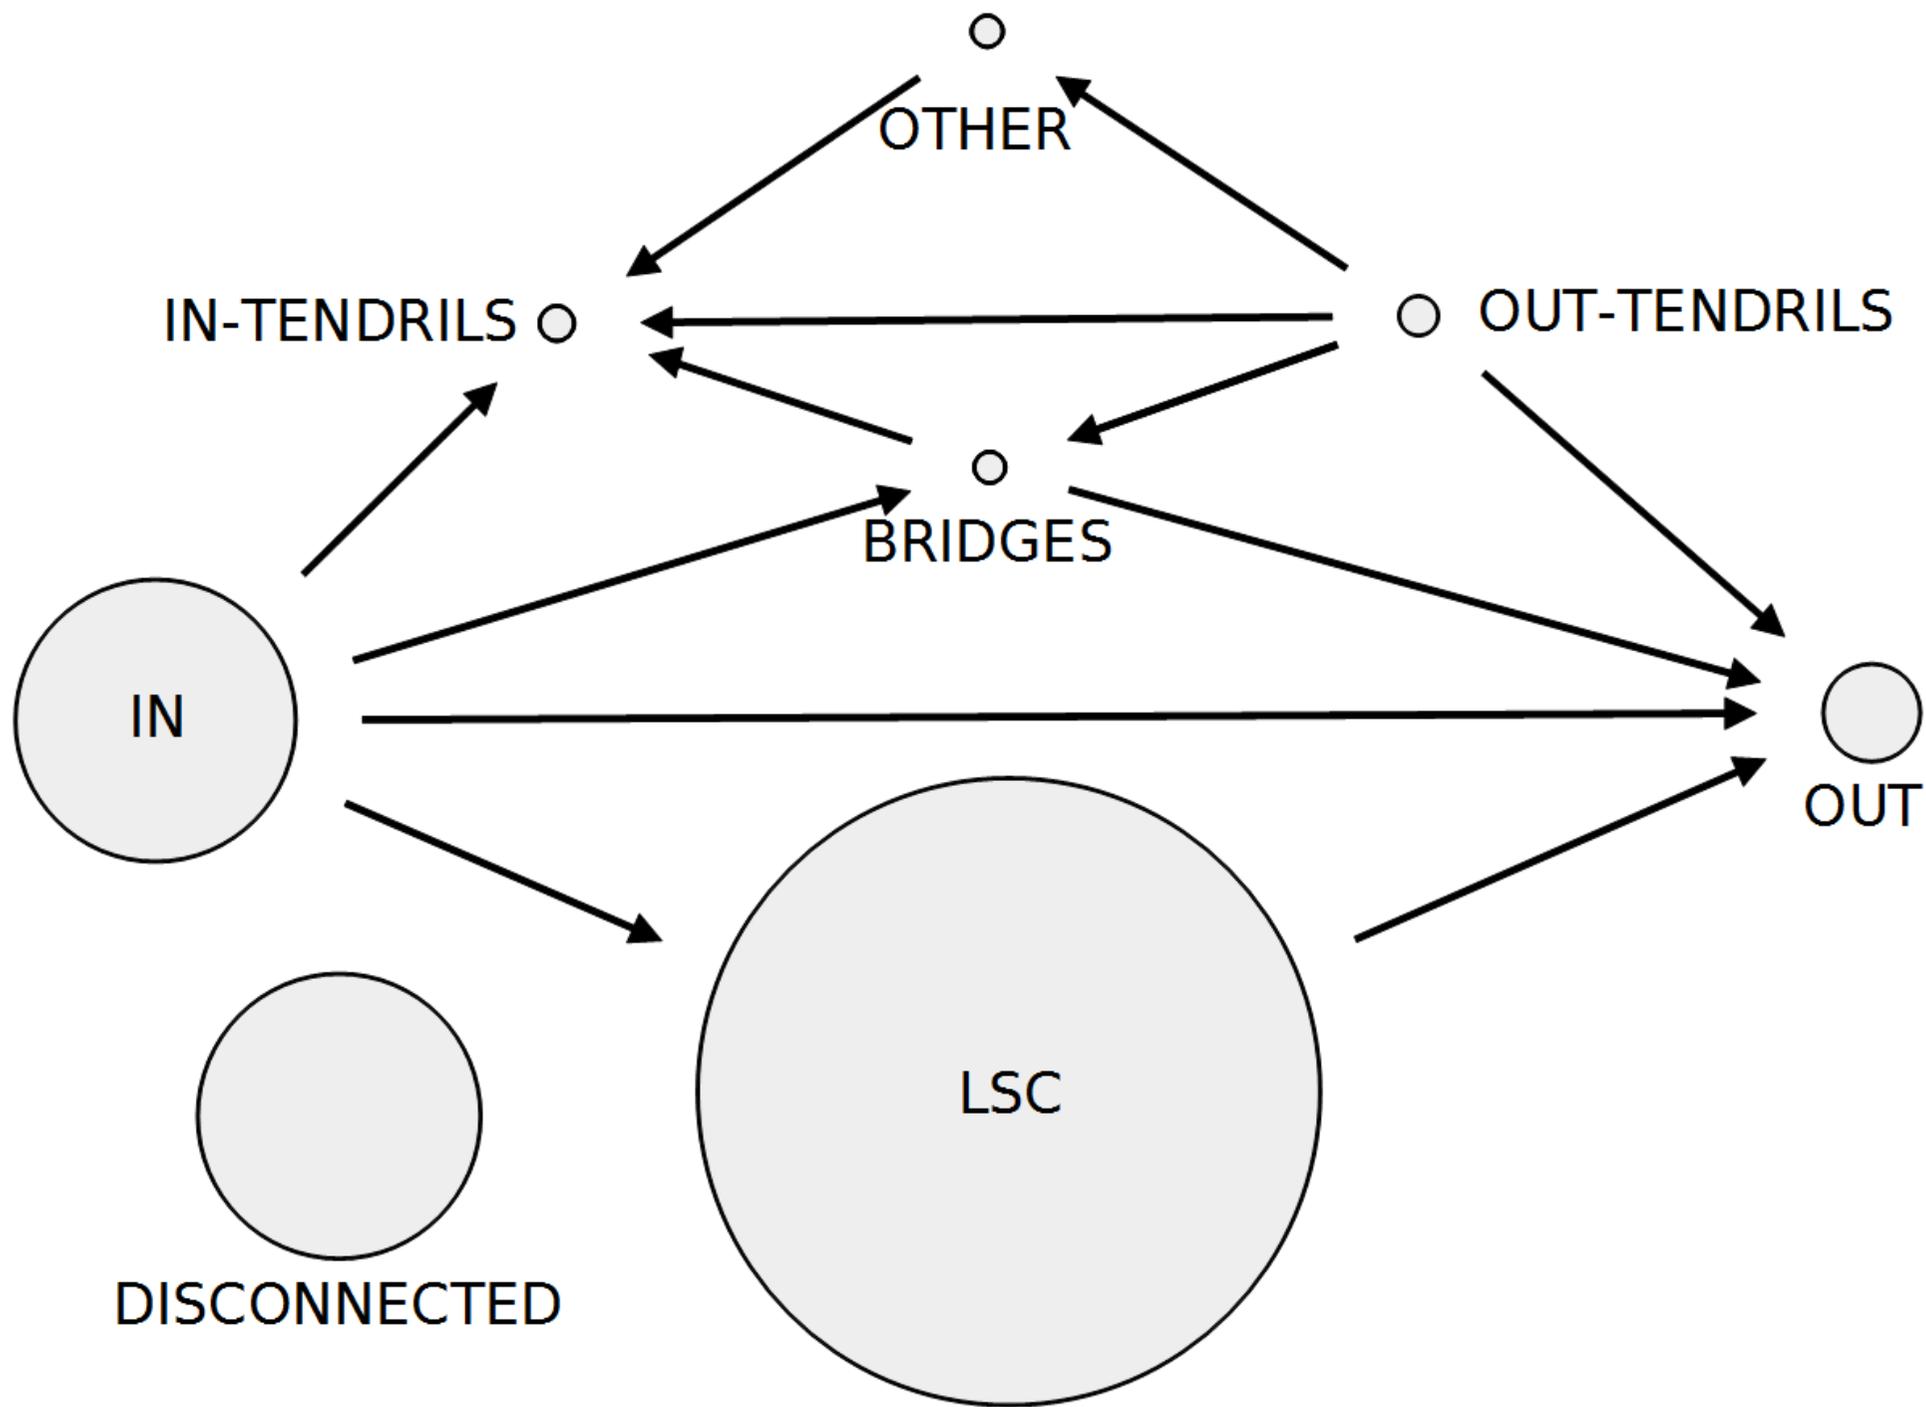

LSC

1% accounts

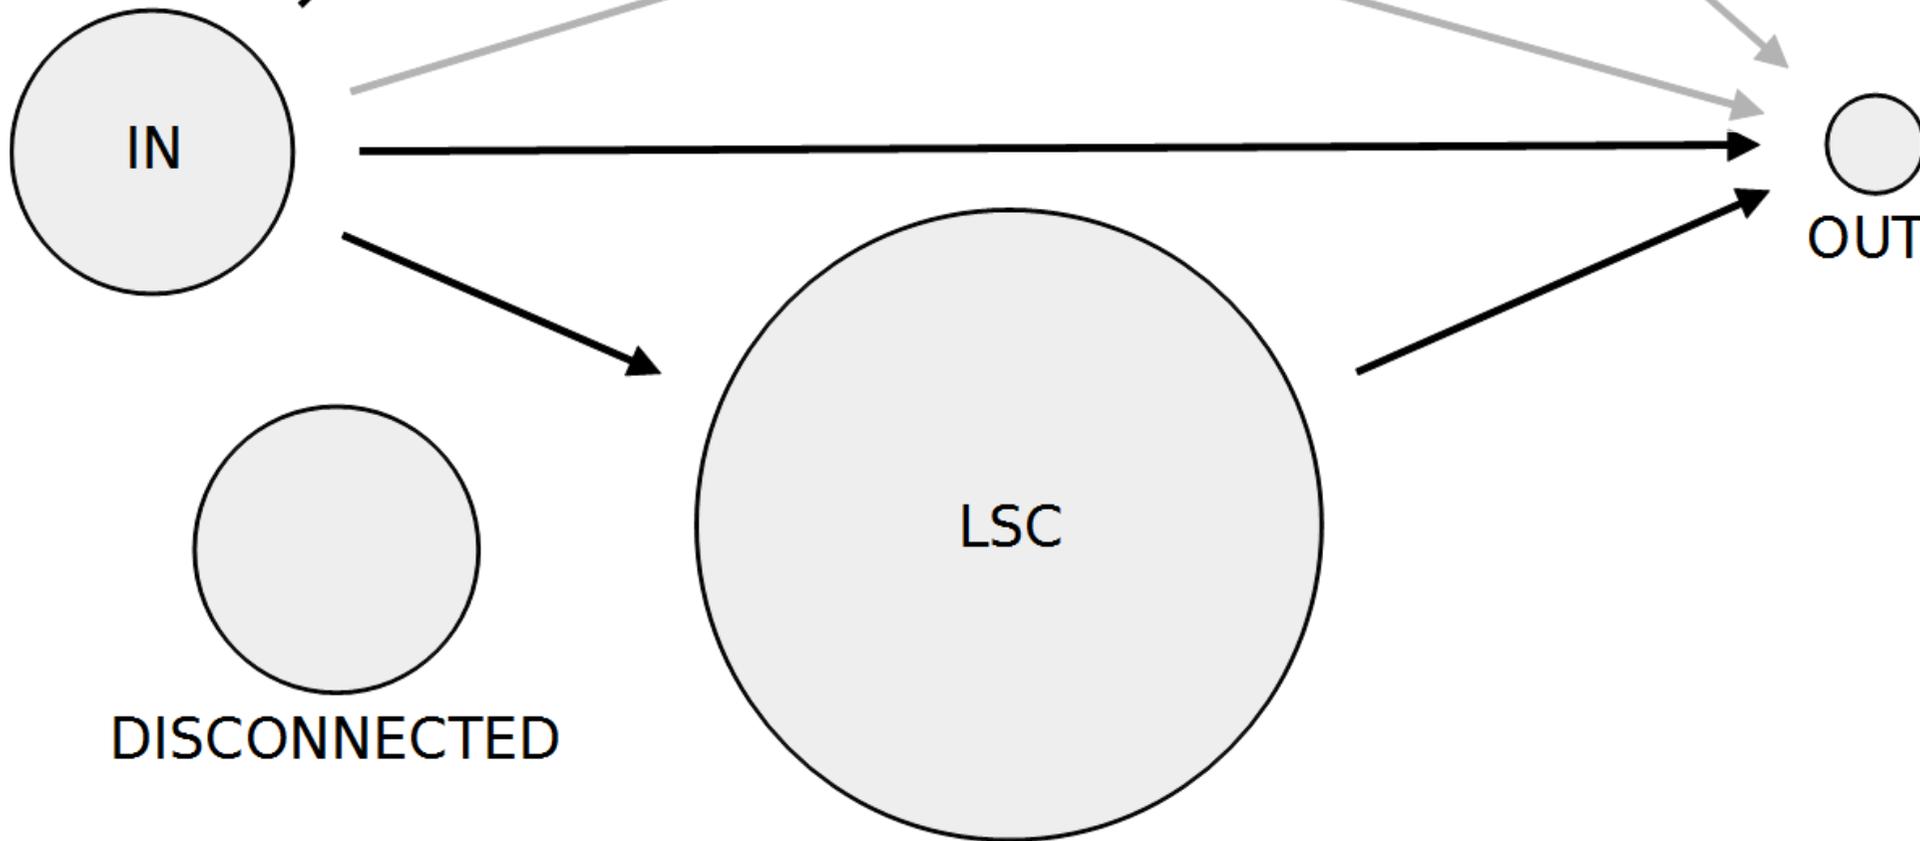

<0.01% edges

<0.01% tweets
