| Introduction | 1 |
| Description of the subjects studied | 1 |
| Thesis contributions | 3 |
| Thesis organization | 4 |
| Notation in use | 4 |
| 1 Inference models to estimate network characteristics | 5 |
| 1.1 Introduction | 6 |
| 1.2 Related work | 7 |
| 1.3 Methodology | 8 |
| 1.4 The $M+M/M/1/K$ queue | 9 |
| 1.4.1 The model | 9 |
| 1.4.2 The loss probability | 10 |
| 1.4.3 The server utilization | 10 |
| 1.4.4 The expected response time | 11 |
| 1.4.5 The conditional loss probability | 12 |
| 1.4.6 The conditional non-loss probability | 14 |
| 1.5 The $M+M/D/1/K$ queue | 15 |
| 1.5.1 The model | 15 |
| 1.5.2 The loss probability | 21 |
| 1.5.3 The server utilization | 22 |
| 1.5.4 The expected response time | 22 |
| 1.6 Using the inference models | 23 |
| 1.6.1 An inference question | 23 |
| 1.6.2 Solving for the equations | 24 |
| 1.6.3 Calculating the moment-based estimators | 37 |
| 1.6.4 Desirable properties of an estimator | 37 |
| 1.7 Simulation results and analysis | 43 |
| 1.7.1 Trace generation | 43 |
| 1.7.2 Estimating cross traffic rate, buffer size and (possibly) server capacity | 45 |
| 1.7.3 Analysis of the results in case μ is known | 46 |

| | | |
|----------|---|------------|
| 1.7.4 | Analysis of the results in case μ is unknown | 58 |
| 1.7.5 | Simulations with several links | 59 |
| 1.8 | Extensions | 61 |
| 1.8.1 | From simulation to reality | 61 |
| 1.8.2 | Example of a possible application | 61 |
| 1.9 | Conclusion | 62 |
| 2 | Estimation of multicast membership | 63 |
| 2.1 | Introduction | 64 |
| 2.2 | Related work | 66 |
| 2.3 | Motivation | 69 |
| 2.4 | Optimal estimation using a Kalman filter | 71 |
| 2.4.1 | The model | 72 |
| 2.4.2 | Kalman filter | 74 |
| 2.4.3 | Simulations | 80 |
| 2.4.4 | Validation with real traces | 84 |
| 2.5 | Optimal estimation using a Wiener filter | 88 |
| 2.5.1 | The model | 89 |
| 2.5.2 | Wiener filter | 90 |
| 2.5.3 | Application to the $M/M/\infty$ model | 93 |
| 2.6 | Efficient estimation using an optimal first-order linear filter | 96 |
| 2.6.1 | The model | 96 |
| 2.6.2 | Optimal first-order linear filter | 97 |
| 2.6.3 | Application to the $M/H_L/\infty$ model | 100 |
| 2.7 | Guidelines on choosing parameters p and S | 100 |
| 2.8 | Validation with real video traces | 102 |
| 2.9 | Estimating parameters ρ and μ | 107 |
| 2.10 | Conclusion | 111 |
| | Appendix: Computing parameters from trace | 112 |
| 3 | Analysis of two agent location mechanisms in a mobile environment | 115 |
| 3.1 | Introduction | 116 |
| 3.2 | Definitions and Notation | 117 |
| 3.3 | The forwarders | 118 |
| 3.3.1 | Description | 118 |
| 3.3.2 | A Markovian analysis of the forwarders | 119 |
| 3.4 | Centralized Server | 132 |
| 3.4.1 | Description | 132 |
| 3.4.2 | A Markovian analysis of the server | 134 |
| 3.5 | Validation and comparison | 139 |
| 3.5.1 | Validation through simulations | 139 |
| 3.5.2 | Validation through experiments | 141 |
| 3.5.3 | A theoretical comparison of both approaches | 146 |
| 3.6 | Extension to the case of multiple source-agent pairs | 148 |

| | |
|----------------------------|------------|
| 3.7 Conclusion | 153 |
| 4 Conclusion | 155 |
| 4.1 Summary | 155 |
| 4.2 Perspectives | 156 |
| Glossary | 159 |
| Bibliography | 161 |
| Résumé – Abstract | 172 |

List of Figures

| | | |
|------|--|-----|
| 1.1 | The methodology | 9 |
| 1.2 | The inference model | 9 |
| 1.3 | Modulus of the zeros of $\mathcal{G}_\rho(z)$, $-\frac{1}{\rho}W_k(-\rho e^{-\rho})$, vs. the traffic load ρ | 19 |
| 1.4 | The parameter $\alpha_j(\rho)$ for $j = 2, \dots, K$ and for several values of ρ | 21 |
| 1.5 | $0 < \rho(a) < 1$ | 30 |
| 1.6 | $1 < \rho(a) < 1/(1 - P_L)$ | 31 |
| 1.7 | $\rho(a) = 1$ | 31 |
| 1.8 | $U \leq x_2 \leq 1$ | 35 |
| 1.9 | $x_2 \geq 1$ | 35 |
| 1.10 | $x_2 = 1$ | 36 |
| 1.11 | Evolution of the estimated cross traffic intensity vs. the number of probes | 48 |
| 1.12 | Evolution of the estimated buffer size vs. the number of probes | 49 |
| 1.13 | Evolution of the estimates vs. the number of probes | 51 |
| 1.14 | Probe traffic: Poisson, cross traffic: On/Off flows, Pareto On/Off times | 53 |
| 1.15 | Probe traffic: Poisson, cross traffic: FTP/TCP sources | 56 |
| 1.16 | The complementary cumulative distribution function of the relative error re- turned by estimates $\hat{\lambda}$ and \hat{K} | 57 |
| 1.17 | The simulated network | 59 |
| 2.1 | Membership evolution of a short audio session and its estimation using a naive approach ($S = 1s$) | 71 |
| 2.2 | Membership evolution of a short audio session and EWMA estimation | 72 |
| 2.3 | Estimation of the multicast membership over time ($p = 0.01, S = 1s$): the light load case $\lambda T = 1/185.9s^{-1}, \mu = 1/6342s^{-1}$ | 81 |
| 2.4 | Estimation of the multicast membership over time ($p = 0.01, S = 1s$): the heavy load case $\lambda T = 1/185.9s^{-1}, \mu = 1/37180s^{-1}$ | 82 |
| 2.5 | Estimation of the multicast group size using the trace of a short audio session and probability plots for the observed data | 85 |
| 2.6 | Estimation of the multicast group size using the trace of a long audio session and probability plots for the observed data | 86 |
| 2.7 | The prewhitening approach | 91 |
| 2.8 | Membership estimation of session $video_1$ and corresponding probability plots | 105 |
| 2.9 | Membership estimation of session $video_2$ and corresponding probability plots | 105 |
| 2.10 | Membership estimation of session $video_3$ and corresponding probability plots | 106 |

| | | |
|------|--|-----|
| 2.11 | Membership estimation of session $video_4$ and corresponding probability plots | 106 |
| 2.12 | Membership estimation of session $video_1$ when (i) parameters are known beforehand, (ii) estimators $\hat{\lambda} = m/(qt_m)$ and $\hat{p} = \mathbf{E}[Y_n]/p$ are used ($q = 0.1$) and (iii) EWMA estimators are used ($\alpha = 0.99, 0.999$) | 109 |
| 3.1 | A time diagram including all RVs relative to the source and to the agent | 118 |
| 3.2 | The short-cutting feature in the forwarding mechanism | 119 |
| 3.3 | System states and transition rates in the forwarding mechanism | 121 |
| 3.4 | The expected number of forwarders | 131 |
| 3.5 | Some possible scenarios in the centralized approach from the source point of view | 133 |
| 3.6 | Details on the service policy at the server | 134 |
| 3.7 | System states and transition rates in the centralized approach | 136 |
| 3.8 | Validation with experiments on a 100Mb/s LAN | 142 |
| 3.9 | Validation with experiments on a 7Mb/s MAN | 143 |
| 3.10 | Experimental results obtained on a LAN and a MAN | 145 |
| 3.11 | Sign of the difference between response times $\Delta T = T_F - T_S$ | 147 |
| 3.12 | Possible choices for modeling the original system | 149 |
| 3.13 | Decomposition of the cyclic-service system into n independent single queue subsystems | 150 |
| 3.14 | Equivalence between two systems, one having a server with vacation (service rate μ) and the other having a server with service rate μ_i | 150 |
| 3.15 | Simulated and analytical response times, utilization of the server and relative error between both response times | 152 |

List of Tables

| | | |
|------|--|-----|
| 1.1 | Schemes for estimating λ, μ and K | 23 |
| 1.2 | Schemes for estimating λ and K (μ assumed to be already known/estimated) | 24 |
| 1.3 | Overall performance of the estimators for 50000 probes and $M+M/M/1/K$ simulations: sample mean and percentiles of the relative error (expressed in percentage) and the empirical variance | 42 |
| 1.4 | Relative error (expressed in percentage) of the estimates for 50000 probes returned by the scheme P_L_R , when the cross traffic is a single Poisson source | 47 |
| 1.5 | Relative error (expressed in percentage) of the estimates (scheme P_L_R) for 120000 probes: Poisson-like flows, $\lambda = 6677$, $\gamma = 250$, $\mu = 6374$ and $\rho = 1.087$ | 49 |
| 1.6 | Relative error (expressed in percentage) of the estimates (scheme P_L_R) for 120000 probes: cross traffic is of type (T3) and (T4) (On/Off flows) | 52 |
| 1.7 | Summary | 54 |
| 1.8 | Relative error (expressed in percentage) of the estimates (scheme P_L_R) for 120000 probes: cross traffic is of type (T5) and (T6) (FTP/TCP flows) | 55 |
| 1.9 | Percentage of hits for scheme P_L_R over the simulations | 58 |
| 1.10 | The 31 simulations where $\hat{U} < 1$ | 58 |
| 1.11 | Details on the cross traffic in the simulated scenarios | 60 |
| 1.12 | Relative error of \hat{K} and $\hat{\lambda}$ (expressed in %) after 5000 probes | 60 |
| 2.1 | Sample mean and percentiles of the relative error expressed in percentage | 83 |
| 2.2 | Mean and variance of the error $e_n = N_T(nS) - \hat{N}_n$ | 83 |
| 2.3 | Sample mean and percentiles of the relative error expressed in percentage | 87 |
| 2.4 | Mean and variance of the error $e_n = N_T(nS) - \hat{N}_n$ | 87 |
| 2.5 | Distributions that best fitted into the inter-arrivals and on-times sequences | 87 |
| 2.6 | Probability of having 5 ACKs or more every S seconds | 101 |
| 2.7 | Parameter identification | 102 |
| 2.8 | Mean and percentiles of the relative error $ N_n - \hat{N}_n /N_n$ | 103 |
| 2.9 | Empirical mean and variance of the error $N_n - \hat{N}_n$ | 104 |
| 2.10 | Distributions that best fitted into the inter-arrivals and on-times sequences | 107 |
| 2.11 | Mean and percentiles of the relative error expressed in percentage | 108 |
| 2.12 | Empirical mean and variance of the estimation error | 110 |
| 3.1 | Values of the probabilities, with $K := (\lambda + \nu + \mu)(\lambda + \delta + \nu)$ | 138 |
| 3.2 | Distribution fits for the model parameters | 140 |

| | | |
|-----|--|-----|
| 3.3 | Sample mean and percentiles of the relative error provided by the models. Default values: $\lambda = 1, \nu = 10, \delta = 11$ (forwarders), $\delta = 15$ (server), $\gamma = 45, \gamma_1 = 115, \gamma_2 = 75, \mu = 2325$ | 140 |
| 3.4 | Sample mean and percentiles of the absolute error on the average number of forwarders in the forwarding mechanism | 144 |
| 3.5 | Sample mean and percentiles of the relative error on the communication time in both mechanisms | 144 |
| 3.6 | Values used for theoretical comparison | 146 |
| 3.7 | Utilization and number of source-agent pairs yielding 10% and 15% of error . | 153 |
