

From EULER Project

PmWiki: Version

Obtaining the PmWiki version

Use the `{$Version}` page variable to display the current version of PmWiki.

See the SiteAdmin.Status page for the current version and version number.

For example

```
This wiki installation is running PmWiki {$Version}, version number
{$VersionNum}.
-<The default group is {$DefaultGroup}.
-<The default name is {$DefaultName}.
-<The site group is {$SiteGroup}
This wiki installation is running PmWiki pmwiki-2.2.4, version number 2002004.
```

The default group is Main.
The default name is Home.
The site group is Site

See also basic variables.

The script `version.php` contains the declaration of the version number.

Obtaining recipe versions

The Site Analyzer can be used to display the current version of Cookbook recipes.
