

Contents

Foreword

PART I. Introduction and background

1. Proofs, Proof development, Logic, and Lambda-calculus, Benjamin Werner and Gilles Dowek, Inria
2. Pure Type Systems, Herman Geuvers, Nijmegen (not included)
3. Inductive Definitions and Type Theory: an Introduction, Thierry Coquand, Chalmers

PART II. Systems

1. The Coq system, Benjamin Werner, Inria (not included)
2. The Isabelle/HOL system, Tobias Nipkow, München (not included)
3. Plastic, Paul Callaghan, Durham (not included)
4. Alfa and Agda, Catarina Coquand and Thomas Hallgren, Chalmers
5. PhoX, Christophe Raffalli, Chambéry
6. Twelf, Carsten Schuermann, Yale
7. A quick overview of PVS and HOL, Laurent Théry, Inria (not included)
8. Proof General: a general man-machine interface for proof assistants, David Aspinall, Edinburgh
9. PCoq, a man-machine interface dedicated to Coq, Yves Bertot, Inria

PART III. Advanced topics

1. Informal Semantics of Type Theory, Per Martin-Löf, Stockholm (not included)
2. Dependant Types in Programming, Peter Dybjer, Chalmers (not included)
3. Model Checking, Abstractions, Susanne Graf, Verimag (not included)
4. Proof-Carrying Code, Gregory Morrisett, Cornell
5. Types for Mobile Process, Davide Sangiorgi, Inria

PART IV. Applications

1. Security, Martin Abadi, UCSC (not included)
2. Hardware Verification, Paul Jackson, Edinburgh (not included)
3. Formalised Mathematics, Laurent Théry, Inria (not included)
