# Mechanical Support for Efficient Dissemination on the CAN Overlay Network

- Francesco Bongiovanni -

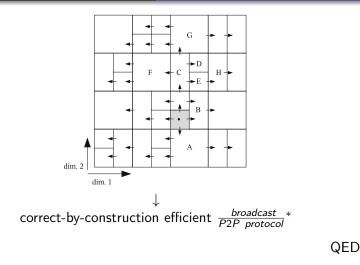

INRIA Sophia Antipolis OASIS team Work done in collaboration with Dr. Ludovic Henrio

12 October 2011

Motivation

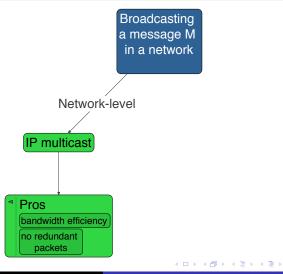

Mechanizing formal proofs Contributions Goals Future Work

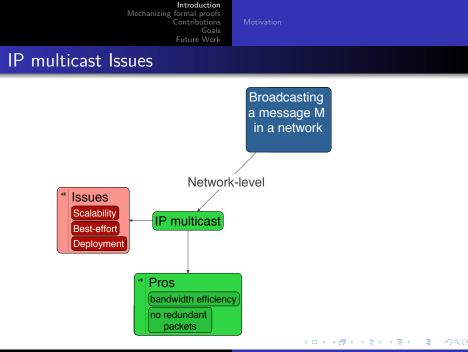

\* conditions apply

Motivation

## **IP** multicast

- Francesco Bongiovanni - Mechanical Support for Efficient Dissemination on CAN (3/26)

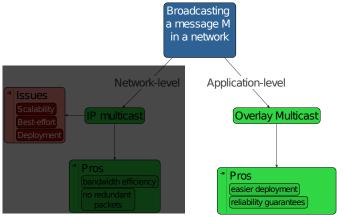

- Francesco Bongiovanni - Mechanical Support for Efficient Dissemination on CAN (3/26)

|--|

• Can we achieve efficient multi-point delivery without support from the IP layer ?

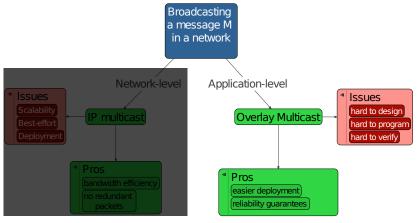

• Can we achieve efficient multi-point delivery without support from the IP layer ?

< □ > < □ > < □ > < □ > < □ > < □ >

• Can we achieve efficient multi-point delivery without support from the IP layer ?

< □ > < □ > < □ > < □ > < □ > < □ >

Introduction Mechanizing formal proofs Contributions Goals Future Work	Motivation
--	------------

• Can we build such delivery mechanism correctly and formally prove its properties ?

**B b** 

- Can we build such delivery mechanism correctly and formally prove its properties ?
  - $\longrightarrow$  Using an interactive proof assistant

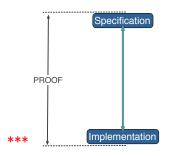

N 4 E N

- Can we build such delivery mechanism correctly and formally prove its properties ? \*\*\*
  - $\longrightarrow$  Using an interactive proof assistant

Motivation

# Context - FP7 STREP PLAY

 Event Cloud : Publish/Subscribe system for large scale RDF data \* processing and storage (based a modified version of CAN).

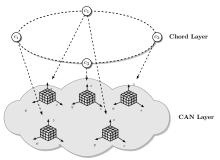

\* RDF quadruple ="{subject, predicate, object, context}"

Motivation

# Context - FP7 STREP PLAY

 Event Cloud : Publish/Subscribe system for large scale RDF data \* processing and storage (based a modified version of CAN).

\* RDF quadruple ="{subject, predicate, object, context}"

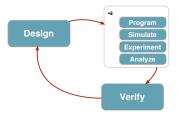

Need for dissemination algorithms for retrieving RDF data efficiently

Introduction Mechanizing formal proofs Contributions Goals Future Work	Motivation
Motivation	

• Dissemination algorithms on top of large-scale P2P systems are hard to :

	Introduction Mechanizing formal proofs Contributions Goals Future Work	Motivation
Motivation		

• Dissemination algorithms on top of large-scale P2P systems are hard to :

< ∃⇒

• Dissemination algorithms on top of large-scale P2P systems are hard to :

- Distributed Algorithms are subtle & error-prone...yet few have been formally verified
- Formal methods to the rescue

Mechanizing formal proofs What's in it for you ?

• Papers with "just" a description of the algorithm

4 1 1 1 4 1 1 1

Mechanizing formal proofs What's in it for you ?

Papers with "just" a description of the algorithm

 [Chord, CAN, Pastry,...]

▲ □ ▶ ▲ □ ▶ ▲ □ ▶

Mechanizing formal proofs What's in it for you ?

- Papers with "just" a description of the algorithm

   [Chord, CAN, Pastry,...]
- Papers with a more precise description of the algorithm and rough hand proofs of correctness

Mechanizing formal proofs What's in it for you ?

- Papers with "just" a description of the algorithm

   [Chord, CAN, Pastry,...]
- Papers with a more precise description of the algorithm and rough hand proofs of correctness

 $\updownarrow$  papers with formal hand proofs

Mechanizing formal proofs What's in it for you ?

- Papers with "just" a description of the algorithm

   [Chord, CAN, Pastry,...]
- Papers with a more precise description of the algorithm and rough hand proofs of correctness

 $\updownarrow$  papers with formal hand proofs

• Papers with machine-checkable proofs ([Charron-Bost & Merz 2009])

Mechanizing formal proofs It's all about trust...

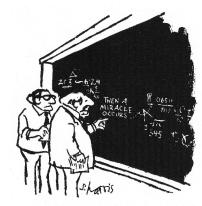

- Nothing is ever certain, but we can achieve high levels of reliability...
- …and theorem provers are more reliable than most human hand proofs.

"I think you should be more explicit here in step two."

Mechanizing formal proofs It's all about trust...

- Nothing is ever certain, but we can achieve high levels of reliability...
- ...and theorem provers are more reliable than most human hand proofs.
- Working in an interactive theorem prover gives you :
  - Confidence in correctness (\*assuming the theorem prover is sound)
  - Automatic assistance in tedious parts of the proof

"I think you should be more explicit here in step two."

Informal description of CAN Sketch of the algorithm A glimpse of the formalization process Summary

# Contributions

• Correct construction of an efficient broadcast algorithm using Isabelle/HOL interactive proof assistant.

- Francesco Bongiovanni - Mechanical Support for Efficient Dissemination on CAN (10/26)

< □ > < □ > < □ > < □ > < □ > < □ >

Informal description of CAN Sketch of the algorithm A glimpse of the formalization process Summary

• Correct construction of an efficient broadcast algorithm using Isabelle/HOL interactive proof assistant.

- The type of props we would like to prove:
  - Efficiency: a node receives the message only once
  - Coverage: all the nodes within a zone must be covered
  - Termination: all the nodes have received the message (only once)

## Contributions - intuition

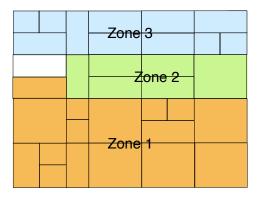

• We split the CAN into *Zones* 

Informal description of CAN Sketch of the algorithm A glimpse of the formalization process Summary

# Contributions - intuition

- We split the CAN into *Zones*
- Zones do not intersect

\* Assuming a method for Zone division

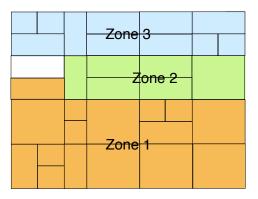

E.g.: Knowing the Space coordinates and its neighbors coordinates, initiator computes the geometrical difference and assigns non overlapping zones to each of its neighbors

ヘロト 人間ト 人間ト 人間ト

Informal description of CAN Sketch of the algorithm A glimpse of the formalization process Summary

# Contributions - intuition

- We split the CAN into *Zones*
- *Zones* do not intersect
- There are valid paths within zones (finite)
- Neighbors are connected

\* Assuming a method for Zone division

E.g.: Knowing the Space coordinates and its neighbors coordinates, initiator computes the geometrical difference and assigns non overlapping zones to each of its neighbors

< □ > < 同 > < 回 > < 回 > < 回 >

Introduction Mechanizing formal proofs Contributions Goals Future Work Informal description of CAN Sketch of the algorithm A glimpse of the formalization process Summary

- What we have done so far:
  - A formalization of an abstraction of CAN overlay network + theorems and correctness proofs.

Introduction Mechanizing formal proofs Contributions Goals Future Work Informal description of CAN Sketch of the algorithm A glimpse of the formalization process Summary

- What we have done so far:
  - $\bullet\,$  A formalization of an abstraction of CAN overlay network  $+\,$  theorems and correctness proofs.
  - A formalization of abstract geometric notions related to CAN, neighboring and communication aspects + correctness proofs

< □ > < 同 > < 三 > < 三 >

- What we have done so far:
  - A formalization of an abstraction of CAN overlay network + theorems and correctness proofs.
  - A formalization of abstract geometric notions related to CAN, neighboring and communication aspects + correctness proofs
  - An example explaining how to define formally a broadcast algorithm for a static CAN.

Current spec + proofs : around 2000 lines of Isabelle code

	Introduction Mechanizing formal proofs Contributions <b>Goals</b> Future Work	
Goals		

#### • Initial goal:

to develop the algorithm correctly and prove its correctness properties.

**B b** 

# Goals...

• Initial goal:

to develop the algorithm correctly and prove its correctness properties.

• Additional goal:

to build a *generic reasoning framework* which will ease the promotion of formal correctness proofs of existing multicast algorithms and also facilitate the design of new ones (which are efficient and fault-tolerant,...).

### Future work

- Implementation
- Consider a dynamic CAN (churn)
- Test different (possibly existing) dissemination schemes
  - multiple initiators, ...
- Fault-tolerant broadcast
- Structured proofs

→
